Ground Equipment Reset Playbook

March 4, 2014

Version 2014-03-04

Sample Reset Playbook Data Sheet

A0097 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0097: RADIO SET, DUAL VEHICLE ADAPTER, 50-WATT (DVA)

1 Radio Set, AN/VRC-110, consist of 2 Vehicle Adapter Units with 2 AN/PRC-152 handheld Radios. The system provides encrypted of Sight communication with both fixed and Frequency Hopping Mode.

Notes: Item should be identified with a 1018 tag and the Principle End-Item manager notified. The PEI manager will use it to fill equipment backorders throughout the Marine Corps. Recommendation: Do Not Power Wash. Use damp rags and compressed air to clean this TAMCN and associated SL-3 equipment.Recommend that the owning unit complete a detailed inventory and maintenance assessment. This will show how much organic supply support will be needed. E

Description of Playbook Contents:

1. **Strategic View of Equipment:** Provides general information on the equipment

   A. Identifies whether the TAMCN is listed on MARES/MEE/ MEF Top 50
   B. Requirements Data is from TFSMS.
   C. O/H Data from TLCM-OST.
   D. Shortfall/Excess is calculated as the difference between the O/H and AAO's. This shows the relative health of the enterprise for this item.

2. **Reset Strategy & Plan:** Provides information on reset strategies and forecasted categories for Equipment in OEF. Items A through C are collected from MCSC. The forecasted categories were calculated from the information provided.

   A. If there are multiple variants of a specific TAMCN in OEF, they are broken out by NSN along with their quantities. The cumulative quantity of the O/H at the NSN level matches with the total O/H from TLCM-OST 4 March 2014 TAMCN data.
   B. Reset strategies broken down by NSN. These strategies represent best estimates of the level of repair necessary to reset the equipment.
   C. Identifies additional attributes of the item.
   D. Forecasted categories were calculated using: (1) the reset strategies to estimate the condition of the equipment when it returns to CONUS and (2) the forecasted final distribution information that was provided by MCLC. In this example, we can see that 47 pieces of equipment are predicted to require Field level maintenance and are selected to return to the MEFs, but since the MEFs are excess they will become CAT II and retrograde to MCLC.
   E. General information pertaining to reset of the item.

3. **Operational View of the R2 Distribution Plan:**

   A. LTI Disposition Information should be used to determine disposition instructions once a condition assessment of the item is performed. It is possible that once performed, the LTI will suggest a disposition that is different from the forecasted categories due to estimation error in the reset strategies.
   B&C. Lift criteria and transportation information that shows options for lift out of theater.
   D. Forecasted final distribution provided by MCLC from the Equipment Sourcing Tool (EST).
   E. Shows the footprint of the item.
   F. Shows constraints for this piece of equipment during transport to CONUS. If the item has associated TAMCNs, the user is instructed to go to the appendix, where more specific information will be displayed.

RESET PLAYBOOK UPDATES

- Update TFSMS AAO Requirements (data pulled on 4 March 2014)

- Utilizing the Net Asset Posture (NAP) Data to articulate On Hand equipment quantities in OEF (4 March 2014), the following DODAACs were included:

M94456	M95104	M95113	M95123	M95205	M95306	M95317	MMX800
M94485	M95106	M95114	M95124	M95301	M95307	M95321	MX4002

A0003 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0003: TRSS DAY/NIGHT IMAGER, V2 (IMAGER 2)

The Day/Night Imager (V)2, (IMAGER 2), AN/PSQ-21 is a hand emplaced, passive thermal infrared electro-optical imaging sensor used to classify and identify active targets within its field of view. The image collected on detected targets is then either transmitted over Radio Frequency (RF) links to sensor monitoring systems, or stored for retrieval at a later date.

Notes: The MEFs SSP are the field level maintainers of this equipment and all TRSS gear considered "mission capable" should be sent directly to them for any additional minor repairs and should then be reissued to fill home station shortfalls. This is electronic gear and should not be agriculturally washed.

A0009 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0009: CONVERTER, MODEM

The Advanced Narrowband Digital Voice Terminal/Tactical (ANDVT/TACTERM), CV-3591(P)/U provides secure voice, data and/or transmission capability for tactical and strategic military users who have access to bandwidth limited communications equipment such as radio, satellite systems and wireline networks. The ANDVT/TACTERM system consists of the Basic Terminal Unit CV-3591, Interface Unit J-3953 and the Communications Security (COMSEC) module KYV-5. The system is designed for operation in tactical and fixed plant environments.

A0013 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0013: THEATER BATTLE MANAGEMENT CORE SYSTEM (TBMCS)

The Tactical Battle Management Core System (TBMCS), AN/TYY-2 also known as the Tactical Command System (TCS) is the air war planning tool which provides the ACE Commander the automated tools necessary to generate, disseminate and execute the Air Tasking Order (ATO)/Airspace Control Order (ACO). TBMCS is the principal aviation command-and-control system within the Tactical Air Command Center (TACC), with remotes located throughout the Marine Air Ground Task Force (MAGTF). TBMCS is composed of a 27-workstation host system which has the ability to receive, parse, display, store, and forward information required to generate and manage ATOs. TBMCS contains computer workstations, servers, and

A0019 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0019: TROPO/SATELLITE SPT RADIO

The AN/GRC-239 Radio Set is a full duplex LOS microwave radio designed for quick deployable military applications. Also known as the TSSR, this radio's ease of set-up, transport, and reliable operations make it a great substitute for long cable runs. The TSSR is used with almost all existing TRI-TAC equipment. The TSSR is capable of providing connectivity to a single TRI-TAC DTG with a data rate from 72-4608 KB/s. The TSSR can also support a balanced NRZ group from the AN/TAC-1 at a 6.144 MB/s data rate. An analog voice order-wire capability is also modulated onto the RF carrier.

Notes: DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter plus the HMMWV may be power washed. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0025 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0025: COMMUNICATIONS PLATFORM, AIR DEFENSE (ADCP)

The AN/MSQ-124 is composed of radio and computer equipment housed in a Lightweight Multipurpose Shelter, mounted on a heavy High Mobility Multipurpose Wheeled Vehicle. The AN/MSQ-124 is powered by a towed generator. The AN/MSQ-124 receives Tactical Ballistic Missile (TBM) data from the AN/TPS-59(V)3 radar and performs a TBM Reporting Responsibility function on the TADIL-J network. The AN/MSQ-124 also distributes Air Breathing Threat data to Short Range Air Defense units. The AN/MSQ-124 possesses an organic voice communications capability via radios and telephones.

Notes: DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter plus the HMMWV may be power washed. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0043 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0043: POSITION LOCATION INDICATOR (MTX)

This is an MTX, DoD Blue Force Tracking (BFT) System that gives commanders the ability to track and receive position location information from dismounted teams and vehicles equipped with the devices. This system employs the COBRA architecture by coordinating with national system managers and war fighting units to collect, process, and disseminate operational BFT data.

TAMCN A0059: DIGITAL TERRIAN ANALYSIS MAPPING SYSTEMS LIGHT

The DTAMS-L is an Intel-based portable system that runs the Windows XP Professional operating system. Its role is to augment the DTAMS configuration. The deployable workstation provides geospatial intelligence analysis capabilities for small unit operations in a defined area of interest. The DTAMS-L hosts an internal 120GB hard drive and an external drive yielding approximately 2TB of available on-line storage. Each DTAMS-L is supplied with an additional internal and external HDD to be used for classified processing. Backup and archival storage is available through the use of a FDD and a DVD +/- R/RW.

Notes: Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. Conduct all repairs/maintenance as required. TAMCN are MARES reportable items, ensure gains and losses are incorporated into unit SORTS reporting. Owning unit will then inventory SL-3 and complete a detailed maintenance assessment. A missing SL-3 listing will be provided to MCSC for determination of re-procurement or cross-leveling of existing spares inventory. If maintenance is beyond the unit capability, an ERO will be opened and the CLS rep will be contacted.

Notes: Owning unit will remove SSRI, UURI, radios, and crypto equipment and coordinate with program office and item manager for item to be sent through IROAN/SLEP and rebuild at depot. Any missing or damaged SSRI, UURI, radios, and crypto will be repaired/replaced through organic or depot maintenance cycle as appropriate. DO NOT POWER WASH. Radio contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0069 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0069: RADIO SET

The AN/VRC-111 Dual Vehicle Adaptor (DVA) is a standardized, Vehicular Radio Set Amplification Kit, that amplifies, and houses the AN/PRC-148 THHR. The AN/VRC 111 provides secure, multi-band communications in the 30-512 MHz (AM & FM) frequency spectrum. The AN/PRC-148 housed in the DVA contains embedded Type I encryption and is interoperable with VHF/UHF /AM/FM, SINCGARS, HAVEQUICK I/II and ANDVT and can be operated in the single-channel mode and can also be used in ECCM frequency hopping modes.

Notes: It was basically a mobile workshop (HMMWV with a Gitchner Shelter) to repair mechanical and electronic components of the Avenger system. This system was taken out of the OpFors years ago. The TAMCN needs to be archived and done away with. Problem is that the net asset posture shows 2 - one at II MEF and one in the War Reserve. This has to go away before TFSMS will let it be archived. By rights of anti-air weapons, the GBAD folks would own this. I suggest we turn it over to the TFSMS support contracts that work for AC LCL and let them get rid of it for us.

Notes: Owning unit will then inventory SL-3 and complete a detailed maintenance assessment. Missing SL-3 will be ordered through organic supply system. If maintenance is beyond the unit capablitiy, a WIR will be submitted. DO NOT POWER WASH. Use damp rags and compressed air to clean this TAMCN and its equipment. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches. NSN ending in 4768 will get upgraded to 3681.

A0118 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0118: RADIO SET, INTEGRATED INTRA-SQUAD

The IISR represents a commercially and militarily proven solution that is technologically mature and stable. The IISR is a form, fit radio modified slightly for use by the Marine Corps. The two primary components for the IISR are the radio and QuietPro tactical headset. The radio provides lightweight handheld tactical communications capability intended for short range urban warfare, open terrain, and heavy vegetation environments. The IISR is capable of both analog and digital operation. The headset consists of two lightweight earpieces and a control unit. The headset's advanced digital design analyses the surrounding sound and adapts the hearing protector continuously to provide full hearing protection and maximum acoustical

A0124 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0124: REMOTE SUBSCRIBER ACCESS MODULE

The TSM provides a flexible unit level switch that bridges legacy TRI-TAC switches (SB-3614, SB-3865, AN/TTC-42) with more robust voice/data switching, data transport, and bandwidth management capabilities. The TSM consists of three functional suites of equipment mounted in transit cases: 1) the DEOS, 2) the RSAM, and 3) the DITS. TSM will maintain USMC joint interoperability as the other services transition to COTS switching technologies. The modular design of the TSM provides the capability to add or delete equipment without adversely affecting existing communications architectures. A further goal is to be capable of easily incorporating new communications technology as it evolves.

TAMCN A0126: MULTI-BAND RADIO, VEHICLE MOUNTED

The AN/VRC-103(V)2 is a vehicular mounted, 50 watt capable variant of the AN/PRC-117F MBR radio. The VRC-103(V)2 MBR covers the entire 30 to 512 MHz frequency range while offering embedded COMSEC, SATCOM, and ECCM capabilities. The VRC-103(V)2 provides secure interoperability with SINCGARS and a host of other tactical radios. The VRC-103(V) 2 can be configured for man-pack, vehicular and base station applications suitable for operation in a multimode service environment. The radio is interoperable with legacy encryption systems and acts as a translator between otherwise incompatible radios. The hardware can be reconfigured and software reprogrammed to optimize performance and add capabilities without opening the

A0132 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0132: DEPLOYABLE INTEGRATED TRANSPORT SUITE

The TSM provides a flexible unit level switch that bridges legacy TRI-TAC switches (SB-3614, SB-3865, AN/TTC-42) with more robust voice/data switching, data transport, and bandwidth management capabilities. The TSM consists of three functional suites of equipment mounted in transit cases: 1) the DEOS, 2) the RSAM, and 3) the DITS. TSM will maintain USMC joint interoperability as the other services transition to COTS switching technologies. The modular design of the TSM provides the capability to add or delete equipment without adversely affecting existing communications architectures. A further goal is to be capable of easily incorporating new communications technology as it evolves.

A0134 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0134: WIRELESS POINT TO P

LSWAN (Ku VSAT) is a small, lightweight, hand-portable, low cost satellite terminal that provides NIPRNET/SIPRNET capability. The Ku VSAT can be quickly set up to tie into the existing commercial Ku infrastructure as an alternate source of transmission for high bandwidth intensive capabilities. LSWAN is an integrated COTS solution. The major functional groups of the LSWAN package are: Ku VSAT antenna, power amplifier, modem, routers, and KG-175s. The Ku VSAT terminal and baseband equipment are packaged in HMMWV transportable transit cases.

A0139 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0139: RADIO SET, AN/TRC-209

The AN/TRC-209 is the HF/VHF transit case transceiver system using the AN/PRC-150(C). It provides high output power (150 watts in HF, 60 Watts in VHF) in a series of transportable cases allowing for use in a variety of dismounted configurations. Key features include: shock mounting of all components; separate HF and VHF antenna outputs; and DC power filtering for supply noise and voltage spike suppression.

Notes: DO NOT POWER WASH THE SYSTEM. The transit cases can be washed and dried completely prior to loading sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe the system clean and filters may be removed. Upon receiving item from theater, owning unit needs to complete a detailed inventory and a detailed maintenance assessment.

Notes: Do not pressure wash. Only use fresh non potable water, do not use saltwater. The corrosion from the saltwater will render the weapon system non mission capable. Ensure embarkation specialist utilizes the Technical manual for proper tie down procedures. Any cargo straps place over the main reflector will cause damage rendering the system non-mission capable. Do not move with stabalizing wheel in position. Ship via MILAIR. Reflector repair costs are estimated at and could potentially exceed $100,000.

A0172 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0172: POWER SUPPLY, UNINTERRUPTIBLE (DDSR-PM)

The current TDN Family of Systems (FoS) consists of Gateways (TDN GW), Data Distribution Systems (TDN DDS/DDS-R/DDS-M), and Information Assurance Boundary (IAB). Together these systems provide the backbone data communications infrastructure to the MAGTF Commander in the form of an integrated data network.

Notes: Return to owning unit but take out of service until maintenance is completed. DO NOT POWER WASH. Item contains sensitive electronics, computer, and software which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0194 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0194: PERSISTENT SURVEILLENCE SYSTEM (G-BOSS) (80' TOWER)

A self-erecting, trailer-mounted tower serves as the base of the G-BOSS. It is designed to provide a stable, elevated platform for the sensor suite and communication devices. Cameras are mounted on a self erecting, telescoping tower. Other associated equipment includes capability for video capture, storage, transmission, and power generation.

Notes: Systems will be shipped to NSWC Crane, where they will be refurbished and tested to unsure they are Condition Code A ready to issue as an operational system. NSWC Crane is currently serving the the supply chain manager for G-BOSS fielded system. Should be shipped with B0077. Prior to wash down system should be in stowed and/or shipping configuration with all connector caps installed. All system components require no special considerations for agricultural wash down. The system is designed to withstand wet environmental conditions.There are several subsystems associated with this TAM that currently have their own TAMCN or will probably have one prior to IOC of Increment 2 of the G-BOSS € Acquistion Program. Examples of subsystems associated with this TAMCN that currently have their own TAMCN are the MEP generators and TRSS. Examples of subsystems associated with this TAMCN that will probably have a TAMCN in the future are COMM Suites, MSTAR Ground Radar, VideoScout, etc..

Notes: The TAMCN for DDS-R (NSN 5895-01-549-4303), should be a consolidation of assets to obtain maximum complete DSMs.This should be completed at ELMACOs or MCLC Fwd. Transport complete PMs to fill any home station shortfalls and DRMO in theater remaining PMs. Do not pressure wash. Only use fresh non potable water, do not use saltwater. The corrosion from the saltwater will render the weapon system non mission capable. Remove hard drives

A0273 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0273: RADIO SET, VRC-110, 20 WATT (AN/PRC152)

The AN/VRC-110_ series of vehicular radios employs the Harris RT-1916C (SSRI). The RT-1916C is a multi-band, hand-held radio that is used in multiple radio configurations throughout the Marine Corps. Commonly referred to as the AN/PRC-152. The PRC-152 has multiple prepositioning criteria issues (Li Batt., HUB, Software).

A0291 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0291: CVRJ @ 1:2 VEH RATIO (RPLCS A0096 / A0137)

The primary purpose of the CVRJ System is to defeat existing Radio Frequency (RF) threats and newly identified Hard-to-Kill RF threats. The CVRJ system accomplishes its primary mission by jamming each threat's transmitted RF signals. The secondary prupose of the CVRJ System is to add the capability to combine multiple internal RF signals and external RF inputs from other systems, and serve as the conduit for transmitting those RF signals while maintaining system interoperability. It accomplishes both missions via 15 waveform programmable RF channels.

A0299 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0299: PRINTER, PORTABLE

AIT devices enable and facilitate data collection and transmission to Automated Information Systems (AISs). AIT devices improve the Marine Corps' logistical business processes and enhance warfighting capabilities by facilitating the collection of initial source data, reducing processing times and improving data accuracy. The AIT program is currently focused on implementing barcode technology - both linear and 2D barcodes and integrating Radio Frequency Data Collection (RFDC) technology to allow near real time processing of data. Successful AIT implementation is dependent on the AIT software development expertise of our information system developers and the ability of the user community to have well documented AIT

A0326 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0326: THOR III

Each Thor III system consists of three dismounted man-pack subsystems. Each subsystem contains a chassis (low band, mid band or high band), a Remote Control Unit (RCU), an integration/pack frame, an Rx/Tx antenna (low band, mid band, or high band), a GPS antenna, cables, and software. Each unit is housed in a separate transit case with protective covers.

A0331 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0331: RADIO SET, LOW PROFILE SINGLE VEHICLE ADAPTER, 50-WATT (VRC)

The AN/VRC-113(C) operates over a 30-512 MHz frequency range with either Frequency Modulated (FM), or Amplitude Modulated (AM) Radio Frequency (RF) output, with a user-selectable power output from 0.1 to 5 watts (depending on operating mode). The radio can interoperate with both 12 kbps (FED-STD-1023) and 16 kbps (VINSON-compatible) equipment. The Basic radio provides the following capabilities: SINCGARS, HAVEQUICK, ANDVT, retransmission, and High Throughput Waveform (HTW).

A0351 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0351: REMOTE CONTROL RADI

The RCS is a compact, rugged system that allows users full remote control capability of any Harris Falcon II or Falcon III radio. The RCS supports full control using the Keypad Display Unit (KDU) and transmits and receives audio and data. The transmitting radio, connected to the Local Control Unit (LCU), can be seperated from the Remote Control Unit (RCU) by distances of up to 3.5 km using standard military field wire. Greater distances are possible using an external fiber modem or HCLOS transceiver. The RCS consists of two identical units designated as the RCU (operator site) and as the LCU (radio site).

A0357 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0357: MONITOR, PHASE

The Interim Sensor Monitoring Group is a tactical, dismounted sensor monitoring and control suite for the TRSS SoS that allows the operators to receive, decode, monitor, and report remote unattended ground sensors activity. The primary components of the Interim-SMG are an antenna subsystem, and integrated transit case assembly of networking devices and sensor communications devices as well as a sensor monitoring workstation.

A0652 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0652: CONVERTER SET, FIBER OPTIC

The Converter Set, Fiber Optic, AN/GSC-54 when used with a Tactical Fiber Optic Cable Assembly (TFOCA), forms a part of the Fiber Optic Cable System (FOCS). The FOCS provides a full duplex fiber optic transmission link between a compatible pair of TRI-TAC equipment. The AN/GSC-54 and the FOCA configuration provides an optical communication link for up to 6 kilometers in length, operating at group data rates ranging from 72 kilobits per second to 4,608 kilobits per second.

A0807 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0807: SAT TERMINAL, MULTIBAND LTWT (LMST) MINI HUB

The AN/USC-65(V)1 and AN/USC-65(V)2 are SHF quad-band (C-band, X-band, Ku-band, and Ka-band) wideband satellite communications ground terminals. The LMST provides a smaller, lighter, modular, more flexible terminal with a hub and spoke capability. The LMST is packaged in two configurations consisting of 3 or 4 transit cases and one 2.5-meter antenna. The AN/USC65(V)1 is contained in 4 transit cases. It has the capability to simultaneously transmit two (one mission and one orderwire) communications carriers and receive seven (six mission and one orderwire) communications carriers through either the terminal's internal antenna or a user-supplied external antenna. The AN/USC-65(V)2 is contained in 3

Notes: Priority Item for LTI in theater before leaving theater. Commercial Depot is located at Harris Corporation in Melbourne, FL. Do not pressure wash. Only use fresh non potable water, do not use saltwater. The corrosion from the saltwater will render the weapon system non mission capable. DO NOT SEPARATE transit cases, ship together. If one transit is missing the weapon system will be non mission capable. A0807 (V)2 = 4 Transit Cases

A0872 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0872: SERVER, INTEL OPS(IOS-OPS)

The Intelligence Analysis System Family of Systems (IAS FoS) uses a three-tiered approach for receiving, parsing, analyzing, and disseminating fused all-source Intelligence data. The first tier, the Marine Expeditionary Force IAS (MEF IAS), is a mobile system that supports the MEF Command Element. The second tier, the Intelligence Operations Server (IOSv2), is a team portable system designed to support the Intelligence Operations of the Major Subordinate Commands (MSC). The third tier, the Intelligence Operations Workstation (IOW), serves as the Intelligence link for the battalion and squadron commands to higher headquarters or as a stand-alone system.

A0880 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0880: AN/UPX-37 INTERROGATOR SET

The Interrogator, Digital, AN/UPX-37 Identification Friend or Foe (IFF) Interrogator has replaced the AN/UPX-27 IFF Interrogators. It will be used for Mark XII and Next Generation IFF processing including Mode S and Mode 5. Its modular/digital architecture affords customized configurations and performance optimization for most applications including Air Defense, Weapon Systems, Air Traffic Control and Range Instrumentation. Digital target reports can be provided in addition to wide band video for subsequent passive/active decoding.

A0882 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0882: JT TACT INFO DISTR SYS (JTIDS)

The Class 2 JTIDS radio terminal is a multi-microprocessor controlled system combining radio, modem, message processor, and message switching system. The JTIDS terminal operates between 960 and 1215 MHz, frequency hopping 77,000 times per second. The JTIDS employs direct sequence frequency spreading as a further anti-jamming measure. The terminal is capable of data transfer at a rate of 115,000 bps and transmit power of 200 watts.

Notes: Return item to owning unit but take out of service until maintenance is completed. Item must be put through maintenance before placing into service at owning unit. Cannot be DRMO'd in theater. DO NOT POWER WASH. Item contains sensitive electronics, radios, computers, and software which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0892 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A0892: FASCIMILE SET, BLACKJACK

The Blackjack Facsimile Set, AN/UXC-10 is a self-contained, portable, rugged tactical multifunctional system for use in harsh field environments. It withstands the toughest military applications, allowing installation in tracked and wheeled vehicles, aircraft and ships. AN/UXC-10 receives/sends data at 64 kbps-transmission rate and provides photographic quality imagery far superior to typical half tones dithered technology. The AN/UXC-10 is a North Atlantic Treaty Organization/Military standard digital facsimile, scanner, printer, and copier.

A1221 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A1221: MONITOR, PORTABLE, HAND HELD, AN/USQ-121

Tactical Remote Sensor Systems (TRSS) are systems that provide the capability for all-weather remote monitoring of activity within and near a given objective area. At a minimum, TRSS is capable of detecting human activity and/or the presence and movement of vehicles, providing real time, near-real time, or non-real time monitoring of sensors ashore and/or over the horizon. Monitoring equipment is lightweight and mobile to support fast-moving amphibious and expeditionary operations. Individual sensors can be emplaced by air or ground forces. Sensors and relays have sufficient power sources to operate continuously for 30 days.

Notes: Depot maintenance is performed at Tobyhanna Army Depot. DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. The system will be secured and should not be opened. Use compressed air and a vacuum to dust and clean any exterior areas. Damp rags may be used to wipe exterior areas clean. The exterior of the shelter plus the HMMWV may be power washed. Upon receiving item from theater, Tobyhanna Army Depot needs to complete a detailed inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic depot level maintenance required.

A2042 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2042: RADIO SET, HIGH FREQUENCY, MANPACK, AN/PRC-150

The AN/PRC-150 provides half duplex HF and VHF tactical radio communications. It provides voice or data (using a modem) through Single Sideband modulation selectable for either USB or LSB. The AN/PRC-150 is capable of ALE compatible with MILSTD-188-141A ALE for frequency analysis. The AN/PRC-150s 20 watt power output is provided by either battery or external electrical power. Transmission security is provided through its embedded Type 1 encryption.

A2043 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2043: RADIO SET, MULTIBAND (URBAN) AN/PRC-148V2

The THHR is a standardized, lightweight, tactical, hand held radio that provides secure, multi-band communications in the 30-512 MHz (AM & FM) frequency spectrum. Initially used by recon & infantry units (platoon, squad, & team), the system later served as a lightweight alternative to the AN/PRC-119 and can be configured for handheld (AN/PRC-148) or vehicular (AN/VRC-111) applications. The AN/PRC-148 contains embedded Type I COMSEC and is interoperable with SINCGARS and HAVEQUICK II in the single-channel and the ECCM frequency hopping modes.

A2068 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2068: RADIO SET, MULTIBAND, FALCON II, AN/PRC-117F

A family of Joint Multi-Radio/Multi-Mode, Software-Defined, Reprogrammable Tactical Radio Systems. Provides high capacity LOS and BLOS plain and secure voice, data, and video while operating in frequency bands from 2 MHz to 2 GHz. Provides network connectivity across the RF spectrum and supports tactical digital information exchanges. JTRS includes the WNW to support the networked communication requirements of the warfighter not achievable with today's systems.

A2073 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2073: RADIO SET

The Radio Set, Manpack, AN/PRC-119D operates as a ground-based manpack radio for tactical communication ofvoice frequency, Frequency Shift Keying (FSK), or digital data. Communication can be secured and/or frequencyhopped for Communications Security (COMSEC) or Electronic Counter-Countermeasures (ECCM) purposes. TheAN/PRC-119D incorporated the technological advances of the RT-1523C(C)/U to support enhanced transmissionand reception of synchronous and asynchronous data. RT-1523C(C)/U has a internalmounted options for a Global Positioning System (GPS) receiver and a Network Access Unit (NAU).

A2077 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2077: RADIO SET, VEHICULAR

The AN/VRC-91 adds the components needed to operate as a manpack radio; otherwise, it is identical to the AN/VRC-89. It does not replace any similar single radio set. The closest configuration would be a combination of a manpack (AN/PRC-77) radio and a vehicular radio (AN/VRC-43 or AN/VRC-46) kept in the same vehicle.

A2079 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2079: RADIO SET, MANPACK

The Radio Set, Manpack, AN/PRC-119F operates as a ground-based manpack radio for tactical communication ofvoice frequency, Frequency Shift Keying (FSK), or digital data. Communication can be secured and/or frequencyhopped for Communications Security (COMSEC) or Electronic Counter-Countermeasures (ECCM) purposes. TheAN/PRC-119F incorporated the technological advances of the RT-1523E(C)/U to support enhanced transmissionand reception of synchronous and asynchronous data. RT-1523E(C)/U improvements include substantial decreasein physical size and weight, an embedded battery box for manpack operation, extended battery life and internalmounted options for a Global Positioning System (GPS)

A2152 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2152: RADIO SET, EPLRS AN/VSQ2C

EPLRS currently consists of an ENM and radios that can be configured for man-pack or various ground platforms use. The AN/VSQ-2D(V)1 is a Data Net Radio that provides secure, jam-resistant radio frequency connectivity and positional location capabilities to the user. The main components of the Radio Set are a RT (RT-1720_(C)/G), an EDPA, a URO device for entering and receiving messages, and the appropriate installation kit for the platform from which it is to be operated. The ENM is a ruggedized laptop-based software program used to establish, monitor and maintain the EPLRS network. The ENM replaces the Enhanced Downsized Net Control Station that was initially fielded with the EPLRS. The ENM offers increased capability and

A2168 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2168: RADIO SET, VEH

AN/VRC-89A is a tactical, long-range/short-range vehicular radio for tactical communications of voice-frequency, frequency shift keying or digital data. Communication can be secured and/or frequency hopped for communications security or electronic counter counter-measure purposes. The AN/VRC-89A capabilities have been replaced by the AN/VRC-89D and exceeded by several other radio systems. This is not a one-for-one exchange with any other radio system. The AN/VRC-89A has become obsolete with the fielding of the AN/VRC-89D, AN/VRC-103, AN/VRC-114 and AN/VRC-110 radio systems.

A2300 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2300: RADIO REPEATER SET

Tactical Remote Sensor Systems (TRSS) are systems that provide the capability for all-weather remote monitoring of activity within and near a given objective area. At a minimum, TRSS is capable of detecting human activity and/or the presence and movement of vehicles, providing real time, near-real time, or non-real time monitoring of sensors ashore and/or over the horizon. Monitoring equipment is lightweight and mobile to support fast-moving amphibious and expeditionary operations. Individual sensors can be emplaced by air or ground forces. Sensors and relays have sufficient power sources to operate continuously for 30 days. TRSS is employed by the Marine Corps Ground Sensor Platoon.

Notes: The MEFs SSP are the field level maintainers of this equipment and all TRSS gear considered "mission capable" should be sent directly to them for any additional minor repairs and should then be reissued to fill home station shortfalls. Else, the gear should be sent to LOGCOM for repair or disposal. The exterior of the vehicle can be powerwashed, but the electronic gear within the shelter should NOT be agriculturally washed. Should the electronic equipment within the TAMCN be powerwashed it would be ruined beyond economical repair and would have to be reprocured. Recommend no local nationals transport this gear as it contains equipment that is considered highly pilferable.

A2333 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2333: SHELTER, TACTICAL, EXPANDABLE, TWO-SIDED

The S-786/G Two-Sided Expandable Tactical Shelter is a self-contained transportable multi-application utility shelter. As a member of family of standard rigid wall International Standard Organizational (ISO) shelters, it is equipped with standard ISO fittings. It is also equipped with mobilizer fittings (for mobilizer transportation) and built-in fork lift provisions. It is designed for all weather operation, and has an environmentally controlled interior, rigid wall construction, and external electrical power connection. Its design incorporates a door activated blackout switch to facilitate operation under blackout conditions.

Notes: DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter can be power washed. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

Notes: DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter can be power washed. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A2534 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A2534: DATA DISTRIBUTION

The Data Distribution System, known as Tactical Data Network (TDN) Server, augments existing Marine Air-Ground Task Force (MAGTF) tactical communications infrastructure to provide the MAGTF Commander an integrated data network. This data network supports MAGTF Tactical Data Systems (TDSs) and the Defense Message System (DMS) by providing a network of communication nodes (gateways & servers) interconnected with one another and their subscribers via a combination of common user long haul transmission systems, local area networks (LANs), the Enhanced Position Location Reporting System (PLRS), and switch telephone systems.

A3232 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A3232: TACTICAL SATCOM, TRANSPORTABLE (SMART-T)

The SMART-T provides tactical users with secure, jam-resistant data and voice satellite communications up to 2.24 Mbps via Milstar Extremely high Frequency (EHF) satellites and compatible payloads. In addition, the SMART-T provides Marine Air Ground Task Force (MAGTF) commanders with extremely reliable, survivable, long-haul connectivity for core command and control links. The AN/TSC-154A Advanced EHF (AEHF) upgrade, together with the AN/PYQ-14 AEHF planning tool will enable SMART-Ts to communicate over new AEHF satellites at up to 8 Mbps.

Notes: Preparing to go through upgrades, as item has been used heavily in theater. Else, send to MCLC for routing to Tobyhanna Army Depot. Do not pressure wash. Only use fresh non potable water, do not use saltwater. The corrosion from the saltwater will render the weapon system non mission capable. Do not separate weapon system from HMMWV. Reset schedule established by Army and subject to change, contact Project Officer prior to fielding shortfall. Always ship MILAIR, due to detailed handling requirements to prevent antenna damage. Embedded Crypto must be removed prior to shipping.

Notes: Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches. DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter plus the HMMWV may be power washed.

A7001 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A7001: TEST SET, OPTICAL POWER

The Optical Loss Test Set is used to perform precise optical measurements in the field. The test set is composed of a power meter (Techlite Model PX-B220) and two different light sources (Techlite model numbers PX-C202 and PX-C205). The set is used to determine the level of optical power being emitted from a transmitter and to perform fiber loss measurements or splice tuning operations of current and future fiber optic cables. The test set also gives the technician the ability to determine power loss in fiber, connectors, attenuators, or other passive optical components.

A7009 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A7009: ANALYZER, SPECTRUM FST-6-NTG3(CREW)

The FSH6-NTG/K-6NUSMC Spectrum Analyzer is a wide band, very sensitive receiver. It works on the principle of "super heterodyne receiver" to convert higher frequencies (normally ranging up to several 10s of GHz) to measurable quantities. The received frequency spectrum is slowly swept through a range of pre-selected frequencies, converting the selected frequency to a measurable DC level (usually logarithmic scale), and displaying the same on the CRT of the FSH6-NTG/K-6NUSMC. The CRT displays received signal strength (y-axis) against frequency (x-axis).

A7036 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A7036: GENERATOR, FUNCTION, ELEC TEST

The Function Generator, model number 33220A, is a general-purpose function generator designed to assist technicians with troubleshooting and repairing communication and electronic equipment. It is a high-performance 20 MHz synthesized function generator with built-in arbitrary waveform capability. The Function Generator uses direct digital-synthesis techniques to create a stable, accurate output signal for clean, low-distortion waveforms. It provides fast rise- and fall-time square wave, and linear ramp waveforms down to 100uHz.

A7517 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A7517: TEST SET RADIO

The ATS-2000 is a fully functional communications test set with the capacity to evaluate the operational performance of communications equipment, such as radios, vehicular antennas, RF cables, and other ancillary Line Replaceable Units (LRUs). Evaluations are performed manually or automated using UUT Interface Devices. The ATS-2000 is capable of providing quantitative measurements of transmitted RF power, receiver sensitivity, frequency accuracy, modulation and waveform metering, spectral analysis (both frequency and time domains), swept antenna measurement, bit error rate, and vehicular platform/environmental RF noise levels. The ATS-2000 features a bail handle, corner protectors, milled front and rear panels, and wraparound

A7910 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A7910: TOOL KIT, FIBER OPTIC, GP

The Fiber Optic tool kit is a general purpose kit used to repair fiber optic cables and connectors. This kit is used in support of all USMC fiber optic cables and connectors except those associated with TAOM. This Tool Kit, along with the A7001 Optical Loss Test Set, the A7004 Fiber Inspector, A7086 OTDR, and A7920 Splicing Kit, belongs to a suite of Fiber Optic test equipment.

A7920 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A7920: FIBER OPTICS FUSION SPLICER

The S121A is the first fully functional fusion splicer. It's designed for splicing single to 4-ribbon fibers. The S121A is about one-third the size of a typical mini-splicer, weighs just 2.2 pounds without the battery and does not require a flat surface. The unit features fully automatic fiber feed, alignment, splicing arc, and tension test. You can monitor all splicing operations for accuracy using the unit's integrated CCD camera and 2.5-inch LCD display.

A8089 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A8089: ENCRYPTION DEVICE, TRUNK

The Trunk Encryption Device, TSEC/KG-194, -194A are full-duplex key generators designed to provide trunk encryption and decryption for digital data traffic. The TSEC/KG-194 is a non-ruggedized, rack mounted equipment. The TSEC/KG-194A is a tactical, ruggedized equipment with a rack mounting capability. TSEC/KG-194, -194A are enhanced versions which have been modified to incorporate the FIREFLY remote re-key capability. Future replacement for the TSEC/KG-194, -194A will be the TSEC/KIV-17M or TSEC/KIV-19M.

A9010 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN A9010: UNIT MOVE WORK STATION

MCEITS is the Marine Corps enterprise IT infrastructure in the MAGTF C2 framework. MCEITS consolidates IT infrastructure, hardware, software and services to achieve economies of scale, reduce redundancy and reduce overall USMC IT portfolio costs. MCEITS implements DoD Net-Centric Enterprise Services (NCES), supports Global Information Grid (GIG) and enables effective, efficient IT portfolio management.

B0003 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0003: AIR CONDITIONER, HORIZONTAL, 1.5T, 60HZ, 18K BTU

The Air Conditioner, 1.5-Ton, 18,000 BTU/hr, is an electric motor driven ECU. These units are capable of providing cooled, dehumidified, heated, and filtered air to a shelter or van. The 1.5-Ton ECU is comprised of an electrical subsystem, a refrigeration subsystem and the structure, i.e., the cabinet and frame. The electrical subsystem is designed to accept 208 VAC, 3 phase, 50/60 Hz input power. The 1.5-Ton ECU weighs approximately 245 pounds and is capable of providing 18,000 BTU/hr of cooling and 13,400 BTU/hr of heating. Low setting provides a minimum of 7,000 BTU/hr of heat.

B0006 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0006: AIR CONDITIONER, MCS VERTICAL, 400HZ, 36K BTU

The Air Conditioner, Marine Corps Standard (MCS), Vertical, 400 Hz, 3-Ton unit is a complete, self-contained, vertical, air conditioner driven by an air-cooled motor and designed for continuous operation under vary ing load conditions. It is used primarily in van-type enclosures for providing filtered, conditioned, cooled, or heated air, as required, to maintain service conditions necessary for the efficient operation of electronic equipment housed within the van. The unit provides complete environmental air conditioning including cooling, heating, ventilation, dehumidification, and filtering and has a nominal cooling capacity of 36,000 BTU and a nominal heating capacity of 28,600 BTU.

TAMCN B0008: AIR CONDITIONER, 5T, 60K

The Air Conditioner, 5-Ton, 60,000 BTU/hr, is a packaged system designed to operate in a portable field capacity, providing conditioned air to a shelter or van. The 5-Ton ECU is controlled with a built-in control box or remote controller and operates using 2O8VAC/3-Phase, 50/60 Hz power supplied by a generator or shore power via a power plug located on the ECU. The refrigerant system uses R-22 refrigerant and has a cooling capacity at 60 Hz of not less than 60,000 BTU/hr at 95°F ambient outside temperature. The heating system is furnished with a 37,000 BTU/hr resistive type heater in addition to fan heat.

TAMCN B0011: AIR CONDITIONER

Environmental Control Units (ECU) provide horizontal and vertical configured military standard air conditioners for cooling, dehumidifying, heating, filtering and circulating air for systems requiring climate control. Refrigeration equipment provides storage of perishables for field messing facilities. Examples of supported equipment are: radar systems, communication centers and computer data systems. This program is intended to maintain its current levels of equipment and to replace aging units with environmentally compatible ECUs.

Notes: For NSN 4120-01-526-2397 (R-22 Model): DRMO/Dispose of In Theater; do NOT return to CONUS. For NSN: 4120-01-581-1276 (R-407C Model): Re-distribute within MEF FWD to fill EDL shortages. Upon return of equipment to CONUS, return to Condition Code "A" at Using Unit and make SL-3 complete. Depot Level Maintenance is NOT part of the maintenance concept for this item. Water (not to exceed 60 PSI) can be used on the external portions of the ECU's. The evaporator coil, condenser coil, and control cubicle should cleaned with compressed air. Coils need to be cleaned from the inside out in order to properly clean them out. The Forecasted Reset Strategy For Distribution shown below is TAMCN specific. There are, however, multiple distribution forecasts for this TAMCN based on the NSN. If distribution differs from below it is because MCLC used the forecast for the applicable NSN.

Notes: Not currently a POR, PM requests that it go back to LOGCOM to be inventoried and determine what to do at that time. Power washing may be completed on the exterior (outside) only of this item. Care should be taken around wiring to prevent damage. DO NOT POWER WASH INSIDE OF SHELTER; interior contains sensitive electronics which water can damage. Use compressed air anUpon MCLB Albany Receiving equipment from theater, PM-CIED should be contacted so a complete inventory assessment can be performed to assertain the equipments reliabilty status.

B0018 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0018: INTEGRATED TRAILER, ECU AND GENERATOR

The Integrated Trailer-Environmental Control Unit (ECU), Generator (ITEG) is an integrated HMMWV-tow able unit that is designed to support highly mobile command and control systems and other forward-deployed operations centers and activities that displace often and have limited access to external power sources. The generator produces 22 kW of electrical power (maximum of 9 kW for external use) and can parallel with other GET units and the MEP-805B Tactical Quiet Generator. The ECU provides complete environmental air conditioning including cooling, heating, ventilation, and filtering and has a nominal cooling capacity of 120,000 BTU and a nominal heating capacity of 47,000 BTU. The integral trailer is based on the standard

Notes: This equipment should not be transported by Local nationals due to the highly pilferable nature of this equipment. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. For the ECU: The evaporator coil, condenser coil, and control cubicle should cleaned with compressed air. Coils need to be cleaned from the inside out in order to properly clean them out. SL-3: SL-3-11490A.

B0025 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0025: HYDRO SEEDER, DUST ABATEMENT, TRAILER MOUNTED

The T-90 Hydroseeder is a trailer-mounted machine that provides dust control on helipads, airfields, lines of communications, and base camps. Dust palliatives are loaded into the palliative tank either full strength or diluted with water. When diluted, the mixture is kept in suspension by a hydraulically powered agitator and recirculation system.

B0027 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0027: DISTRIBUTION SYSTEM, MOBILE ELECT PWR, 5KW (INDOOR)

The 5 kW GFCI protected, Indoor model, Power Distribution Box is part of the Mobile Electric Power Distribution-Replacement (MEPDIS-R) system. MEPDIS-R is designed to provide electrical power distribution in a field environment. The MEPDIS-R system provides a flexible, modular, recoverable, safe power distribution capability that can be quickly emplaced and recovered for later reuse. The 5 kW Indoor Power Distribution Box provides 18 GFCI-protected single-phase 15A receptacles to power tent lighting or other equipment. It is designed to be deployed in a tent or sheltered environment.

TAMCN B0029: DISTRIBUTION SYSTEM, MOBILE ELECT PWR, 15KW

The 15 kW Power Distribution Box is part of the Mobile Electric Power Distribution-Replacement (MEPDIS-R) system. MEPDIS-R is designed to provide electrical power distribution in a field environment. The MEPDIS-R system provides a flexible, modular, recoverable, safe power distribution capability that can be quickly emplaced and recovered for later reuse. The 15 kW Power Distribution Box has two 60A input connectors to permit load parallel ing and load transfer. The panel provides (4) 30A 3-Phase, (3) 20A single-phase output connectors, and a covered duplex receptacle.

B0038 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0038: ALL TERRAIN CRANE (ATC) MAC-50

The All Terrain Crane (ATC) is a rubber tired, hydraulic boom, all terrain crane capable of lifting and swing ing a maximum of 80,000 pounds. The ATC will support construction and materiel handling tasks, as well as, loading and unloading supplies and equipment. It will be used to load/unload break bulk cargo from a fixed port or pier; on and off airfield runways; and over unprepared and uneven surfaces. It will also be capable of being driven over primary and secondary highways to include sand, snow, and mud. The ATC is fielded with a set of lifting slings. The lifting capacity of these slings is 40-Ton.

Notes: Many of these items were ARMY assets and are not ours - follow instructions only if they are our assets. If serviceable, distribute to MEF, if unserviceable DRMO. Depot Level Maintenance is NOT part of the maintenance concept for this item. A pressure washer can be used on the interior and exterior of the box, excluding the Refrigeration Unit (RU). The RU needs to be cleaned using compressed air and coils need to be cleaned from the inside out in order to properly clean them out. SL-3: SL-3-11574A. MARCORSYSCOM has not shipped ANY of this TAMCN / NSN to OEF, so none of these are in OEF to our knowledge. Commercial boxes may look similar, but are white in color and do not have the safety features of the USMC LFRS.

B0055 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0055: BATH SHOWER UNIT, EXPEDITIONARY, FIELD

The Field Expeditionary Bath Shower unit consists of six separate but identical and interchangeable shower modules, with interconnecting hoses, electric feed water and drain pumps, and a drain hose. The M-80 Water Heater supplied with the unit is a self-contained, oil-fired boiler capable of providing 120°F water at 18-GPM. Each module consists of a fiberglass base, a top frame, six vertical supports, a cover, and two-shower heads. The individual modules can be connected together in any quantity desired.

B0058 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0058: LTWT VEH MOUNTED MINE ROLLER SYS

The Mine Roller System (MRS) is a countermine system that is mounted on wheeled vehicles to reduce the impact of pressure-activated explosive devices. The MRS detects and neutralizes mines and improvised explosive devices before the host vehicle passes over them.

B0069 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0069: CLIMBERS SET, TREE AND POLE

The Climber's Set, Tree and Pole, Model TK-1141/C, provides climbing equipment which allows the Line man to ascend poles or trees and secure himself without the aid of a ladder. This permits freedom of the hands while working aloft. The set also contains tools for hoisting needed items from ground level, as well as required personal protective equipment. The set consists of a case, three trays of equipment, and equipment stored in the bottom of the case. Trays are numbered 1 through 3 starting with the top tray.

B0071 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0071: LIGHT WEIGHT WATER PURIFICATION SYSTEM

The Lightweight Water Purification System (LWPS) is a lightweight, modular, highly transportable, self-contained water purification system consisting of four functional components: 1) Raw Water, 2) Pre-filtration, 3)Reverse Osmosis, and 4) Product Water. It also provides four optional extended capability modules: 1) Ocean Intake Structure System 2) Nuclear, Biological, Chemical (NBC) Water Treatment System, 3) Cold Weather, and 4) NBC Survivability. Employed and recovered from operational sites by four personnel (Threshold) or two personnel (Objective) After employment, put into operation by one Marine (MOS 1171, Basic Water Support Technician) within 45 minutes Daily operational setup and shutdown shall require no more

B0074 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0074: AIR CONDITIONER, MCS HORIZONTAL, 60HZ, 9K BTU

The 9,000 BTU ECU will provide a replacement for the current 9,000 BTU Shelter Mounted Air Conditioner and be capable of providing complete environmental control, to include cooling, heating, dehumidification, ventilation, and filtering for various types of portable military shelters or tactical vehicles. The 9K address a specialize need that certain units in the Marine Corp have for a highly mobile power and environmental control source.

Notes: Used with the GBOSS system and should be reassociated at MCLC. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components.

B0078 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0078: GRADER, MOTORIZED

The 120M Motorized Road Grader is a self-propelled grading machine powered by a diesel engine. It has rubber tires, six-wheel drive, and an articulated frame with front-wheel steer design. It is equipped with a 12' blade with a minimum shoulder reach of 6' outside the wheels and has a minimum lift above ground of 16". It is reconfigurable to accept an armored cab. The advanced joystick control system replaces the traditional array of levers and steering wheel, which greatly simplifies motor grader operation by placing total machine, drawbar, and moldboard control into both of the operator's hands. Applications of the 120M include grading coarse and fine soil, creating low and high bank slopes, flat and V-ditches, scarifying,

B0092 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0092: TRAILER SET,MINE DE

The three mine detonation trailers are pulled by a single husky vehicle in order to produce large ground pressure in order to initiate pressure plate firing systems in mines and IEDs. The tires of the three trailers are staggered in a manner that ensures pressure is applied to the entire width of the travelled lane.

B0152 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0152: BRIDGE, MEDIUM GIRDER, DRY GAP - (MGB)

The Medium Girder Bridge (MGB) is a deck-type, two-girder bridge system providing a 4-meter wide road way to span wet or dry gaps. The MGB is a lightweight, bridging system quickly erected by hand in various con figurations and lengths with minimum site preparation. Bridges up to Military Load Class (MLC) 70 (tracked) or 100 (wheeled) can be constructed and dismantled quickly by trained Marine Corps Engineer units to keep pace with operations.

B0160 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0160: ASSAULT BREACHER VEHICLE

The Assault Breacher Vehicle (ABV) is based on the MIAI chassis. Integrated subsystems include an armored turret, Full-Width Mine Plow (FWMP), Combat Dozer Blade (CDB), Linear Demolition Charge System (LDCS), Lane Marking System (LMS), Integrated Vision System (IVS), Thermal Weapon Sight (TWS), Vehicle Intercommunication Set (ANNIC-3), ANNRC-103 Radio System, Embedded Diagnostics (ED) System, Defense Advanced Global Positioning System (GPS) Receiver (DAGR), and a Weapon Platform Station (WPS). The inclusion of the Rapid Ordnance Removal System (RORS) and the Surface Mine Plow (SMP) as part of the Front End Equipment (FEE) will be addressed at a later date. The ABV is assigned to and employed by

B0171 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0171: BUCKET, CLAMSHELL

The Bucket, Clamshell is hydraulically operated and capable of working at, above and below ground level. It is capable of digging loose to medium type soils and suitable for excavating vertical shafts or footings, filling bins or hoppers, and unloading aggregate from flat bottom gondola railroad cars. The Bucket, Clamshell is used on the All Terrain Crane MAC-50 (TAMCN B0038).

B0176 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0176: BUCKET, CONCRETE

The Bucket, Concrete is an upright type that can be used on any crane with at least one drum and sufficient capacity to handle the bucket with wet concrete loads of approximately 3,550 pounds. All welded construction is designed to handle concrete of normal slump mixtures. Discharge gates can be operated by one man and dis charge of load can be controlled by the operator. The Bucket, Concrete is used on the Crane, High Speed, High Mobility (TAMCN B0043).

B0395 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0395: COMPRESSOR, AIR, 260CFM, W/PNEUMATIC TOOLS

The portable air compressor is a trailer mounted unit which will furnish compressed air at the rate of 260 CFM at a pressure of 100 psi. It is designed to run at its rated capacity under adverse conditions of heat, cold, rain and dust, and will operate pneumatic tools as well as provide compressed air for bridging and bulk fuel oper ations. The compressor is used by Combat Engineers Battalion, Engineer Support Battalion, Artillery Regiment, Ground Combat Support and Marine Aircraft Wing units. Pneumatic tools are components (SL-3 items) of the compressor unit.

B0475 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0475: DETECTING SET, MINE, METALLIC, PORTABLE

The AN/PSS-12 Mine Detector is a man-portable metallic mine-detection system that is used to detect AntiPersonnel land mines. The AN/PSS-12 is designed to detect mines with very small proportions of metal content above ground and beneath the surface of fresh or salt water. Its compact, lightweight frame, makes the AN/PSS 12 ideal for fast and accurate terrain reconnaissance.

B0571 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0571: DRUM, FABRIC, COLLAPSIBLE, 500 GAL. CAP., WATER

The 500 Gallon Collapsible Potable Water Drum is a durable non-vented, hermetically sealed, collapsible fabric container used to store and transport drinking water. It is cylindrical when filled to capacity. It is designed for use with the Forward Area Water Point Supply System FAWPSS (B0676, pg. 2-81). The drum is fitted with two 2-inch cam-lock type filler/discharge ports and may be folded for storage. Yoke, towing and lifting (TAMCN B2730, pg. 2-175) is required if the drum is to be towed or lifted. This equipment is associated with the FAWPSS (B0676, pg. 2-81).

B0572 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0572: TANK, FABRIC, COLLAPSIBLE, 50K

The 50,000 Gallon Collapsible Tank is constructed of impregnated fabric and equipped with 4-inch elbow hose connections for storage of bulk petroleum products. The 50,000 Gallon Collapsible Coated-Fabric, Fuel Tank assembly includes an aluminum tank chest, ground cloth, emergency repair kit, and required components for venting and draining. This assembly is designed for use with the Tactical Airfield Fuel Dispensing System (TAFDS) B0675, pg. 2-80) and the Amphibious Assault Fuel System (AAFS) (TAMCN B0685, pg. 2-82).

B0579 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0579: DUMMY LOAD, GENERATOR SET, ELECT, 100KW, TRLR-MTD

The Dummy Load, Generator Set, 100kW provides electrical load simulating capabilities for maintenance and operational evaluation of mobile electrical power sources. It is a self-contained, air-cooled, skid-mounted unit, suitable for indoor and outdoor use. The unit contains all instruments, controls, and power loads for testing AC generators. The unit is capable of being trailer mounted.

Notes: For NSN 6150-01-306-2943: Dispose of In Theater; Do NOT return to CONUS. For NSN 6150-01-557-1304 (new AVTRON model): Re-distribute within MEF FWD to fill EDL shortages. Upon retrograde, conduct LTI and determine worth returning to CONUS or not. If returned to CONUS, return to Condition Code "A" at Using Unit or IMA and make SL-3 complete. Re-distribute to fill any shortages within the Marine Corps; store any excess at MARCORLOGCOM. Load banks require special consideration for washdown. The internals of a load bank should never be cleaned with running water. Damp cloths can be used to wipe out any residue vacuums won't remove. Water can be used to clean the exterior of a load bank as long as all doors are tightly closed and high pressure water is not directed into any seem or opening on the load bank. SL-3: SL-3-07500C The Forecasted Reset Strategy For Distribution shown below is TAMCN specific. There are, however, multiple distribution forecasts for this TAMCN based on the NSN. If distribution differs from below it is because MCLC used the forecast for the applicable NSN.

B0589 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0589: EXCAVATOR COMBAT (M9 ACE)

The M9 ACE is a tracked, highly mobile, armored earthmover capable of supporting the maneuver element in offensive and defensive operations. It accomplishes critical combat engineer tasks such as preparing hull def ilade fighting positions for guns and tanks, and preparing protected positions for other critical battlefield systems to increase their survivability. The M9 ACE will prepare combat roads, remove roadblocks and other obstacles, and prepare access routes at water obstacles. It also performs countermobility tasks such as preparing antitank ditches. The M9 ACE requires a single operator and can attain a speed of 30 mph on land. The system is configured for on and off-loading in C130 and CS aircraft.

B0605 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0605: DISTRIBUTION SYSTEM, POWER, ELECT, 100KW

The 100 kW Power Distribution System is a skid-mounted unit used in combination to provide electric power to a network of multiple 120/208V/1-Phase loads and 120V/1-Phase loads from a remote generator or facility power. Circuit breakers are accessed through a hinged cabinet cover and input/output receptacles are covered. Cables interconnect the individual power distribution panel board assemblies. All assemblies consist of a box, a frame assembly, and a cover assembly. It is equipped with rear access door assemblies, and front and rear panel receptacles. This set includes five input and 17 output cables, and an eyebolt for lifting.

B0608 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0608: WIRING HARNESS,FIEL

The Field Wiring Harness MLK-0000 provides electrical power distribution and illumination through receptacle circuits/power outlets for various field unit complexes. The unit is portable and suitable for the use in indoor/outdoor environments. Standard electrical requirements for the Field Wiring Harness are the electrical power distribution panels. The, cable assemblies are grouped into separate duffel bags and labeled as follows, “GP” Tent 10 duffel bags, “CP” Tent 2 duffel bags and “Maintenance Tent” 1 duffel bag.

B0626 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0626: FIRE SUPPRESSION SYSTEM, MOBILE (AVIATION TYPE)

The Fire Suppression System (FSS) is comprised of a twin agent fire extinguishing assembly mounted inside the bed of a M1097A2 High Mobility Multi-Purpose Wheeled Vehicle (HMMWV). The system consist of 80-gallons of pre-mixed Aqueous Film Forming Foam (AFFF) and 200 pounds of dry chemical (Potassium Bicar bonate), both fire suppressants are expelled by compressed gas through a twinned hand line and a single nozzle. The FSS's mission is to provide fire suppression and fire fighting capability for class A and B type fires in support of bulk fuel storage sites, Ammunition Supply Points (ASP), and base camp operations, and Forward Arming and Refueling Point (FARP) missions.

B0640 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0640: FLOODLIGHT SET

The Floodlight Set (FLS) is a self-contained system with a power plant capable of providing up to five acres of 360 degree general illumination and security use. It can also provide accessory power with at least 12 hours of continuous operation. It has a primary tower with three mast-mounted lights and tripod-mounted ground lights that are capable of continuous field deployment in a wide variety of environmental extremes and rough terrain. For flexibility, the set is configured so that it can be mounted on the USMC M116A3 and LTT-MCC trailers.

Notes: NSN 6230-01-530-8890: Re-distribute within MEF FWD to fill EDL shortages. Upon return of equipment to CONUS, return to Condition Code "A" at Using Unit and make SL-3 complete. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. SL-3: SL-3-11120A

B0675 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0675: FUEL SYSTEM, AIRFIELD, TACTICAL(FIRESTONE)

The primary purpose of the Tactical Airfield Fuel Dispensing is used for receiving, storing, and dispensing aviation fuel in support of expeditionary airfields. With the single fuel on the battlefield concept, the system will be able to supply fuel to both aviation and ground assets. The system has a storage capacity of 320,000-gallons and a pump capability up to 600 GPM. The system has 12 aircraft dispensing points for a multi-aircraft refueling capability and a capability to receive fuel from multiple sources.

B0685 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0685: FUEL SYSTEM, AMPHIB ASSAULT, 600K GAL CAP

The primary purpose of the Amphibious Assault Fuel System (AAFS) is used for receiving, storing, transferring, and dispensing bulk fuel for all elements of the Marine Air-Ground Task Force (MAGTF). The system has the capability to transfer bulk fuel to outlying expeditionary airfields, receiving from various sources, dispensing to ground vehicles, pumping capability up to 600 GPM, and storing up to 1,120,000-gallons of bulk fuel product.

B0695 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0695: LABORATORY, PETROLEUM, TACTICAL, MEDIUM

The Tactical Petroleum Laboratory, Medium (TPLM) provides those essential testing components integrated in an ISO shelter to monitor the critical physical and chemical characteristics of aviation and ground fuels. Military and commercial fuels (to include captured fuels) can be tested for composition and quality against minimum standards as specified in MIL-STD-3004A, Quality Surveillance for Fuels, Lubricants and related products. The TPLM also serves as the primary source for monthly correlation testing for filter effectiveness in support of the Marine Wing Support Squadrons. Operational and ancillary equipment include the Air Conditioner, 36,000 BTU, Vertical, b0013; Air Conditioner Skid Assembly, B2006 and 30 kW TOG,

B0730 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B0730: GENERATOR SET, 3KW, 60HZ, SKID-MTD

The 3 kW Generator Set, MEP-831A, is a self-contained, skid mounted, portable unit. It is equipped with controls, instruments and accessories necessary for operation. The generator set consists of a diesel engine, permanent magnet A/C generator, control box assembly, output/load panel, primary and auxiliary fuel systems, enclosure cooling and ventilation system, engine exhaust assembly, and a 24 Vdc battery. The generator set is designed to be used with any equipment requiring a small source of NC power and operates in a "Hot and Basic" climatic condition range of -25 F to 120 F. The generator set is portable and requires a six-person lift.

Notes: For NSN 6115-01-150-414- MEP-016B and NSN 6115-01-456-5046: DRMO/Dispose of In theater; do NOT return to CONUS. For NSN 6115-01-285-3012, MEP-831A: Upon return of equipment to CONUS, return to Condition Code "A" at IMA and make SL-3 complete. Depot Level Maintenance is NOT part of the maintenance concept for this item. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. SL-3: SL-3-6115.

TAMCN B0953: GENERATOR SET, SKID MTD, 30KW/60HZ, TQG, MEP005A

The 30 kW Generator Set, MEP-805A, is a fully enclosed, self-contained, skid-mounted, portable unit. It is equipped with controls, instruments, and accessories necessary for operation as a single unit or in parallel with another unit of the same class and mode. The generator set consists of a diesel engine, brushless generator, excitation system, speed governing system, fuel system, 24 Vdc starting system, control system, and fault system. The generator set is designed to be used with any piece of equipment requiring a medium source of A/C power and operates in a "Hot and Basic" climatic condition range of -25 F to 120 F.

Notes: For NSN 6115-00-118-1240, MEP-005A and NSN 6115-01-274-7389, MEP-805A: DRMO/Dispose of In theater; do NOT reurn to CONUS. For NSN 6115-01-461-9335, MEP-805B: Upon return of equipment to CONUS, return to Condition Code "A" at IMA and make SL-3 complete. Depot Level Maintenance is NOT part of the maintenance concept for this item. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. SL-3: SL-3-6115. TAMCN B0980: GENERATOR, LTWT, MAN-PORTABLE

The 2kW Military Tactical Generator Set, (MTG) MEP-531A, is a self-contained, skid mounted, portable unit. It is equipped with controls, instruments and accessories necessary for operation. The generator set consists of a diesel engine, direct drive AC alternator, speed governing system, fuel system, 24VDC auxiliary cold weather starting system (23°F or below), and generator control system. The generator set is designed to be used with any equipment requiring a small source of AC power and operates in a "Hot and Basic" climatic condition range of -25°F to +120°F. The generator set is portable and requires a four-person lift.

B1082 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1082: GRADER, ROAD, MOTORIZED

The Motorized Road Grader is a self-propelled grading machine powered by a diesel engine, It is rubbertired, four-wheel drive, and has an articulated frame and front-wheel steer design. The primary use is for building and maintaining roads and airfields. The fuel capacity is 75 gal. (284 L) with a maximum travel speed of 24.5 mph (39.4 kph).

B1135 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1135: REFUELING SYSTEM, EXPEDIENT, HELO

The Helicopter Expedient Refueling System is designed for support of helicopter refueling operations in forward areas and remote sites. It is normally used in Forward Arming and Refueling Point (FARP) operations. Versatility, easily transportable, and quick setup are the key elements of the system. The HERS has a maximum capacity of 18,000-gallons with 500-gallon bladders and 3,000-gallon collapsible tanks and a pumping capability of 150 GPM. It may be deployed as a whole, in part, or with other tactical fuel systems.

B1139 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1139: HOSE REEL SYSTEM

The Hose Reel System (HRS) provides bulk fuel transfer capability within the Marine Air-Ground Task Force (MAGTF). Each system has a total of five miles of 6-inch lay-flat lightweight fuel hose on eleven hose reels (each reel contains 2,400 foot or four sections of 6-inch by 600-foot lay-flat lightweight fuel hose). The HRS system consists of two base units, two power units, eleven hose reels, and ancillary components necessary to interconnect to the other tactical fuel systems. The HRS has a manual deployment capability of 5 mph and a powered deployment and retrieval capability of 2 to 2.5 mph.

B1298 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1298: KIT, LAUNCH, LINE CHARGE, TRLR-MTD

The MK 155 MOD Oil is a hydraulically elevated launch rail and container frame for the M58 Linear Demolition Charge (LDC). It mounts to the M353 general purpose trailer chassis. This mobility allows it to provide the only responsive, explosive minefield/obstacle clearing capability in the Marine Corps inventory. The system is operated from inside the host vehicle thus protecting the operators from direct and indirect fires during employment. The M58 Linear Demolition Charge will breach a lane approximately 8 m wide by 100 m long. When combined with the M353 or M200 trailer chassis, and M58168 line charge and MK22 rocket, the MK 155 becomes the MK 2 MOD 0 Mine Clearance System. (M68 is the inert round).

B1420 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1420: TEST KIT, PETROLEUM

The Aviation Fuel Contamination Test Kit is a portable petroleum quality surveillance kit consisting of com ponents and testing equipment capable of determining contamination levels in aviation fuels. The kit has the capability to take in-line samples in tactical fuel systems, mobile refueling equipment, and commercial refueling equipment. The kit can test for specific gravity, free-water, and particulate contamination in aviation fuel samples. The Aviation Fuel Contamination Test Kit is associated with the (TAMCN B0675, pg. 2-80) Tactical Airfield Fuel Dispensing System and (TAMCN B0685, pg. 2-82) Amphibious Assault Fuel System.

B1645 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1645: REFRIGERATION UNIT, ENHANCED F/RIGID BOX

The Refrigeration Unit is a 4,500 BTU, one-piece condenser/evaporator refrigeration unit. It is designed to be used with an insulated container of rigid construction to form a complete combination freezer and chill box and is used to cool/chill the 350 cubic foot capacity Refrigerator, Rigid Box, (TAMCN B1710).

B1720 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1720: REINFORCEMENT SET - MGB

The Reinforcement Set consists of reinforcing links that are connected to form a pair of chains beneath each bridge girder. Links are connected to bottom panels at the ends of the bridge by reinforcing posts that enable the system to be tensioned as the posts are pulled towards a vertical position by cable jacks. The kit is manufac tured in the same light alloy material as the bridge. It is used with the Medium Girder Bridge (MGB) (TAMCN B0152, pg. 2-50).

B1922 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1922: SCRAPER-TRACTOR, WHEELED

The Scraper-Tractor is an open bowl, pneumatic-tired, 2-Axle, 14 to 18 cubic yard capacity, single dieselpowered, articulated frame-steer scraper. It is employed by engineer units in earthmoving operations in the main battle area. It can be used as an earthmover and extractor during road or airfield construction, construction of anti-armor ditches, weapon emplacements, and the hauling and employment of material for obstacles. It is not approved for transporting by air mode.

B1951 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B1951: SHOP EQUIPMENT SET, GP, #1

The Shop Equipment, General Purpose Repair, Semitrailer Mounted (SEGPRSM) is a semitrailer mounted machinist van containing tools and equipment for use in maintenance and repair of mechanical equipment from 1St to 4th echelon. It contains a 10 KW MEP-803A generator or can be driven by alternate AC power source. The van requires input power of 208 volt, 3-phase, 60 Hz for operation. It has an air compressor, and capabilities include drilling, welding, grinding, valve grinding, and honing. It can be open-weather or self contained, including a person nel heater. It has expanding canopies, and frames and curtain assemblies so that an enclosed work area may be set up around the semitrailer.

TAMCN B2464: TRACTOR, FT, W/MULTIPURPOSE BUCKET

The 1155 Bucket Tractor is a diesel engine-driven, hydraulically operated, crawler-type front-end loader. The multipurpose bucket is capable of performing operations of clamshell, dozer, and scraper, as well as front and shovel. The tractor is intended for digging, lifting, transporting, and dumping operations under rough terrain conditions.

B2566 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B2566: FORKLIFT, RT, LT CAPABILITY (LRTF)

The Rough Terrain Forklift is a lightweight, diesel powered, air transportable forklift used for lifting palletized loads up to 5,070 pounds. Equipped with a telescopic boom, 4-wheel, crab, and circle steering modes. It will be employed by the combat engineer battalion, artillery units, the engineer support battalion, landing support battalion company, other ground support combat service support units, and various Marine aircraft wing units. It is required to clear landing zones of supplies and equipment, to load and unload combat vehicles, aircraft, and ISO containers.

B2605 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B2605: PURIFICATION SYSTEM, WATER, TACTICAL

The TWPS (MC-TWPS) is a skid -mounted unit transportable by the Medium Tactical Vehicle Replacement (MTVR) truck (MK 23, MK 25) or by a 5-Ton forklift. The system includes the basic TWPS skid, 6,000-gallon water storage capability, and all BII, but does not include the power source (i.e. generator) or the extended capability modules. The system can be powered by a 60 kW, 4I6VAC high, WYE source. Five extended capability modules are purchased and deployed separately as required by their mission; (a) Ocean Intake Structure System, (b) Supplemental Cleaning, Waste and Storage, (c) Cold Weather, and (d) Nuclear Biological and Chemical (NBC) Treatment and (e) MBC Survivability.

B2685 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B2685: WELDING SHOP, MARINE CORPS TACTICAL

The Marine Corps Tactical Welding Shop (MCTWS) consists of selected tools and equipment integrated with an enclosure mounted on a 1/2-Ton modified, two-wheeled military trailer, chassis model M103A3. The MCTWS provides compressed air on demand, electrical power for lights and electric hand tools, and an illumi nated work surface with a vise. The welder can also be operated by external 230V/3-Phase/single phase power. This self-contained shop set will enable Marine maintenance personnel to perform a variety of welding processes for maintenance and repair of equipment in remote locations.

B7900 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN B7900: INTERMEDIATE LEVEL ELECTRICIANS TOOL KIT

The I-Level Tool Kit is comprised of various hand tools and accessories to aide Marines in Military Occupational Specialty (MOS) 1141 to install and maintain interior wiring in fixed structures. The I-Level Tool Kit will come in a rugged/transportable case, and will include electrician's tools, testers, and meters contained within its own rugged/transportable case with foam inserts and molded plastic trays for tool storage and protection. These new modernized tools are configuration controlled. Refer to SL-3-1 1 390A for complete listing and description of tools.

C0019 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C0019: FORCE PRO KIT - ATFP KIT (PART OF C0020)

A versatile package of Commercial-Off-The-Shelf (COTS) and Government-Off-The-Shelf (GOTS) Non-Lethal equipment. The contents (COTS/GOTS) can be divided into four distinct categories: personnel protectors; personnel and materiel effectors; mission enhancers; and training devices. The items enable the individual Marine or a small team or unit to be proactive in retaining the initiative in peacekeeping environments; to respond to provocation more subtly than through the use of deadly force; and to effectively control the non-traditional battlefield within the constraints levied by Rules of Engagement (ROE). NOTE: The C0019 capability has been replaced by the Escalation of Force-Mission Modules (C01047B). SEE DP 5500

C0020 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C0020: ANTI-TERRORISM/FORCE PROTECTION CHECKPOINT SET (ATFPCS)

The Anti-Terrorism/Force Protection Capability Set (C00207B) enables Marines to more accurately andthoroughly inspect vehicles and personnel for weapons and explosives by providing Commercial-Off-The-Shelf(COTS) and Government-Off-The-Shelf (GOTS) materiel solutions. The set provides lighting (tripods andhandheld), explosive detection, vehicle impairment, and vehicle undercarriage inspection capabilities. The Anti-Terrorism/Force Protection Capability Set increases the survivability for Marines from potential threats by givingearlier warning and reaction capability to those manning the checkpoints. Additionally, the capability increases the survivability of noncombatants approaching Vehicle Check Points and Entry Control

C0104 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C0104: ESCALATION OF FORCE-MISSION MODULES (EOF-MM)

The C0104 is know as the Escalation of Force-Mission Module. The EoF-MM consists of multifunctional non-lethal weapons systems and force protection equipment needed to satisfy the operational requirement in order to minimize friendly and civilian casualties. The EoF-MM is the replacement of the existing Non-Lethal Capability Sets (NLCS) and Force Protection Capability Sets (FPCS) procured in the middle 1990s and early 2000s. The EoF-MM consist of selected equipment that provides operational capabilities for use during escalation of force situations found primarily, but not exclusively, while operating under restricted Rules of Engagement (ROE). The EoF-MM consists entirely of equipment that is COTS/GOTS.

C0114 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C0114: EXTINGUISHER,FIRE

The Secondary Fire Suppression System (AFES-R) is based on UUNS #09107UB, which requests a "system of systems" that would 1) reduce the risk of secondary fires, 2) quickly extinguish external fires to prevent their breaching the crew compartment, 3) protect the occupants of the vehicle against fires that do penetrate the crew compartment and 4) provide a capability for personnel from other vehicles to suppress fires and rescue the crew.

C2032 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C2032: MONITOR,CHEMICAL AG

The Chemical Agent Monitor is a handheld device capable of detecting various levels of nerve and blister agents. The CAMs detect vapors of chemical agents by sensing molecular ions of specific mobilities (time of flight) and uses timing and microprocessor techniques to reject interferences.

C2104 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C2104:

Unlike conventional fielding methodologies the M4 JCADs (and all other CBRN Defense Equipment) are fielded directly to the CSFs. The Operating Forces will draw their allotment of M4 JCADs based on the manning allocation in TFSMS and operational requirements. Quantities fielded to each CSF are based on the type of using units, the manning of those using units, and the Basis of Issue (BOI) requirement. The BOI requirement for the M4 JCADs is as follows: (1) CE is 1 per 20 individuals; (2) GCE is 1 per 13 individuals; (3) ACE is 1 per 20 individuals; and, (4) LCE is 1 per 20 individuals. Per ALMAR 070/03, Consolidated Storage Facilities (CSFs) are the designated storage and management activities for CBRN Defense Equipment. See

C7033 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C7033: SHOP EQUIPMENT,CONT - UNARMORED (RPLCS B1951)

The Shop Equipment, Contact Maintenance Common #20 is a self-contained tool & equipment shelter mounted on a HMMWVA2 chassis. The Common #20 is for contact maintenance and immediate on-site emergency maintenance. It consists of hand tools, power tools, oxy/acetylene (gas) cutting & welding capability, with compressor and pneumatic tools all located within easy reach of the mechanic. The drawers in the workbench have foam cut outs to expedite inventory, provide standardization/configuration management, and minimize tool loss.

C7900 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C7900: TOOL KIT,AIR CONDIT

The Too Kit, Air Conditioning (TKAC) is a programmable system capable of storing, recycling, evacuating and charging air conditioning systems with R134A refrigerant and refrigerant oil quickly and accurately. The TKAC is equipped with O-rings, refrigerant, leak detectors and hand tools unique to air conditioning repair. The maintainer will also be able to recover, recycle, evacuate, and recharge the system.

C7905 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN C7905: SHOP EQUIPMENT, GENERAL PURPOSE COMMON #22

The Common #22 is part of the Common 2x family of shop sets, all with similar tool loads and maintenance capabilities. The Common #22 is a tool shelter mounted on a standard M1102 Cargo Trailer intended to be towed by a HMMWV. The shelter contains tool cabinets with drawers, storage spaces and various mounting brackets for oversized tools and other standard shop type equipment. The Common #22 provides compressed air and electricity to operate pneumatic & electric powered tools.

D0003 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0003: MTVR, TRK ARMD, CARGO, 7T W/O, NON REDUCIBLE (AMK23)

The AMK23 is the MK23/MK23A1 with non-reducible MTVR Armor System (MAS) installed. The AMK23A1 is the MK23/MK23A1 with reducible MAS installed. Reducible MAS is reducible to a height of 98 in, and was designed to meet the height restrictions aboard naval ships. The MAS kits are designed for the 7-ton MTVR. The kits provide complete 360-degree protection as well as overhead and underbody protection for the crew compartment. A Troop Carrier is available as an option for either kit.

D0009 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0009: TRUCK TRACTOR

The MK31A1, 7-ton tractor variant, replaces the M818, M931 and the M931A1 5-ton tractor series. This vehicle is equipped with all wheel steering and a sliding 5th wheel. The MK31A1 was procured as the prime mover for the MK970 5,000 gallon refueler. MK31A1 is referred to as “ready to accept armor” (RTAA). This model has upgraded cab mounts, armored flooring, upgraded suspension, and air conditioning.

D0013 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0013: TRK TRACTOR, ARMD, 7T, 5TH WHEEL, NONREDUCIBLE, AMK31

The AMK31 is MK31/MK31A1 with non-reducible MAS installed. The AMK31A1 is MK31A1 with reducible MAS installed. Reducible MAS is reducible to a height of 98 in, and was designed to meet the height restrictions aboard naval ships. The MAS kits are designed for the 7-ton MTVR. The kits provide complete 360-degree protection as well as overhead and underbody protection for the crew compartment.

D0016 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0016: TRLR, CARGO

The M1102H is a single axle, two wheel, aluminum frame trailer designed to be towed by the HMMWV. The body is equipped with a tailgate and mounting brackets for cargo racks and a frame for a tarpaulin cover. A steel A-frame is bolted to the frame with an attached one -position lunette, landing gear and two hand brake levers. The M1102H is designed to operate on all types of roads, cross-country terrain and in all weather conditions. There are no restrictions on the M1102H for movement over primary and secondary roads; however, it is restricted to a maximum speed of 20-mph cross-country.

D0023 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0023: MINE RESISTANT AMBUSH PROTECTED (MRAP), AMBULANCE

The Cougar HEV is a versatile, diesel powered, pneumatic tired, heavily armored, multi-purpose vehicle that is urgently needed by Explosive Ordnance Disposal teams deployed in support of Operation Enduring Freedom and Operation Iraqi Freedom (OIF) to increase their survivability against Improvised Explosive Devices (IED). The Cougar HEV has adequate armor protection and possesses the capability to carry all required EOD equipment. The Cougar HEVs are also required for contingency operations in support of the Global War on Terrorism by Engineer Mine Clearing teams against IEDs.

TAMCN D0025: MINE RESISTANT AMBUSH PROTECTED (MRAP), CAT I

The Cougar Hardened Engineer Vehicle (HEV) 4x4 is a member of the Mine Resistant Ambush Protected (MRAP) Family of Vehicles (FOV) which is capable of transporting personnel and cargo within the current theater of operations. All weather and rugged off road capability. It enables forces to survive when engaged, maintain battle space awareness and retain flexibility to accomplish a variety of missions, to include EOD, combat engineer, convoy escort/security, direct Close Air Support (CAS), medical support, troop/cargo transport, reconnaissance and mobile command and control.

D0035 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0035: TRAILER, PALLETIZED LOADING SYSTEM

The PLS Trailer is designed to carry loads behind the LVSR with minor preparation. The trailer may also be towed behind other USMC heavy tactical trucks. Is used in conjunction with the M1077/MK1077 flatracks. Capable of carrying payloads up to 16.5 tons, is equipped with a flatrack that is interchangeable between truck and trailer. The prime mover truck and trailer form a self-contained system that loads and unloads its cargo without the need for forklifts or other material handling equipment.

D0036 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0036: MATV

The primary mission of the M-ATV is to provide protected ground mobility. The MATV is capable of operating in a threat environment involving ambushes employing the use of mines, Improvised Explosive Devices, Rocket Propelled Grenades, Explosively Formed Penetrators, and Small Arms Fire. The M-ATV was designed to enhance the effectiveness of ground combat forces with a focus on stability operations against unconventional enemy forces engaged in irregular warfare on a non-linear battlefield.

Notes: Use a high pressure washer for cleaning exterior of engine, capsule and body. Rinse with hot water, if available. An ordinary garden hose, with nozzle, may be used if other equipment is not available. Ensure a complete rinsing. Do not allow a stream of water to contact Dash, Dashboard Components and other Electrical connections. The Forecasted Reset Strategy For Distribution shown below is TAMCN specific. There are, however, multiple distribution forecasts for this TAMCN based on the NSN. If distribution differs from below it is because MCLC used the forecast for the applicable NSN.

D0040 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0040: MINE RESISTANT VEHICLE

The SABER system with TOW missiles are a proven highly accurate and effective weapon with a very low collateral damage against point targets at distances longer (3,750m max effective range) than the enemy can effectively engage friendly forces with direct fire weapons. The ability to employ the SABER TOW missile system from an MRAP CAT I or II Independent Suspension System (ISS) equipped MRAPs allows Commanders to provide greater protection for their gun crews and engage the enemy with a precision, low collateral damage weapon system at long ranges.

TAMCN D0080: CHASSIS, TRLR, GP, 3 1/2T, 2-WHL

The M353 is a single axle, 2-wheel, heavy-duty chassis designed to be towed by 5-ton trucks or MTVRs. It is designed to haul general payloads of up to 7,000 pounds. Has a raised A-frame bolted in the front of the chassis with an attached lunette, safety chains, lifting shackles and bars for handling. Frame has steel wheel covers and two hand brake levers mounted forward of the wheels beside the swivel caster landing gears. Two rubber tires mounted on retractable landing gears located on the front corners. Maximum towing speed for the M353 is 50-mph on highways and 25-mph cross-country.

D0085 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0085: CHASSIS, TRLR, 3/4T, 2-WHL (Many Variants)

The M116A2 and M116A3 trailers are single axle, 2-wheeled, general-purpose chassis designed to be towed by the HMMWV. They are constructed to transport electric power generators but can be configured to haul other items adding different beds to the chassis. The M116A3 utilizes the HMMWV radial run flat wheel and tire assemblies. The M116A3 consists of a steel A-frame draw bar bolted to the frame with an attached one-position lunette, landing gear and two hand brake levers. It is designed to operate on primary and secondary roads at a maximum speed of 50-mph and cross-country at a maximum speed of 30-mph.

TAMCN D0187: TRUCK,UTILITY

The M1097A2, Heavy HMMWV will replace the M1037, M1042, M1097 and M1097A1 heavy shelter variants. It is designed to carry heavy electronic systems or weapons platforms. This variant may be configured to act as a command post shelter from which battlefield traffic may be monitored and a communication center from which personnel may monitor incoming and outgoing radio and telecommunication traffic during operations. The M1097A2 may also be configured as a troop carrier.

D0195 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0195: LOAD SYSTEM, PALLETIZED, (PLS) FLATRACK

The PLS Flatrack Model M1077/MK1077 is a 20-foot long by 8-foot wide welded steel flat cargo body with a front wall equipped with a lifting point. The flatrack is equipped with ISO locks, sideboard kits and tie down fasteners. A fully loaded flatrack can be self-loaded and self offload by an LVS MK18A1 without the aid of additional material handling equipment and by an LVS MK18 equipped with container lifting and loading chains. There is no hydraulic air or electrical connections or equipment on the flatrack.

D0201 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0201: MULTI-FUEL MOTORCYCLE

The M1030B1 Motorcycle is a two-wheeled, gasoline powered, dual purpose on and off road utility vehicle. The motorcycle is a commercially available Kawasaki KRL 650 modified for military use by Hayes Diversified Technologies. The M1030B1 will be employed in garrison and field environments and is designed to perform in all weather conditions (except snow and ice).

D0209 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0209: POWER UNIT, FRONT, 12 1/2T, 4X4, LVS ARMORED

The MK48/MK48A1 and their RBUs form the LVS. Used primarily by combat service support motor transport units to haul supplies in large quantities, the MK48/MK48A1 is an all metal, fully enclosed, 4x4 tactical front power unit with a crew of two. Improvements to the MK48A1 variant include a revised battery box and cover, a modified air intake cover, and added handles and steps to the top of the power unit. The low profile, cab-forward configuration of the MK48/48A1 permits loading aboard military aircraft with no preparation when coupled to any of the driven RBU.

D0215 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0215: TRLR SEMI 5000GL REFUELER, MK970 (ARMORED PACKAGE)

The M970, 5,000-gallon mobile refueler (USMC TAMCN D0215) provides aircraft refueling/defueling and over-the-road transportation of bulk fuel. It is assigned to both the aviation combat element (ACE) and the Marine Logistics Group (Logistics Combat Element (LCE). Within the ACE, the M970 is organic to the MWSS and is used primarily to refuel aircraft. Within the LCE, the M970 is organic to the motor transport battalion and is assigned to LCE motor transport and/or engineer detachments. The LCE uses the M970 to transport bulk fuel between storage sites or directly to the customer.

D0876 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0876: TRLR, POWERED, 22 1/2T, CONTAINER HAULER, 4X4

The MK14/14A1 combines with the MK48/48A1 Power Unit (D0209) to form the container hauler variant of the LVS. Is a tandem axle, all metal, rear body unit that couples to the MK48/48A1 to form an integrated, articulated, wheeled vehicle. Primary mission is to transport ISO/ANSI containers from the beach to unit supply points. It is capable of accommodation up to six empty or four full fuel (B2085) or water (B2086) modules and one pump unit from the SIXCON system. The RBU is equipped with a towing pintle for towing trailers, howitzers and an additional MK14/MK14A1 RBU equipped with a tandem tow lunette extension kit.

D0877 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0877: TRLR, POWERED, WRECKER/RECOVERY, 4X4

The MK15/15A1 RBU combines with the MK48/48A1 Front Power uni to form the wrecker/recovery variant of the LVS. The MK15/15A1 is equipped with a MHC used for removing power packs and loading equipment and standardized containers. An auxiliary hydraulic circuit in the vehicle provides power for hydraulic tools and can also be used to supply another RBU with hydraulics. Has an electrically operated hydraulic remote control unit allowing operation of the crane and winch from a distance. Has a remote control stowage unit for the MCH, and a Boom Angle Indicator which displays the angle of the MHC boom during operation.

D0878 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0878: TRLR, POWERED, 5TH WHL, SEMI-TRLR ADAPTER, 4X4

The MK16/16A1 combines with the MK48/48A1 Power unit to form the fifth wheel semi-trailer variant of the LVS. The MK16/16A1 is used to transport semi-trailers. Also transport towed type full trailers and semitrailers. Has fifth wheel support blocks, which are used to support the fifth wheel when disconnecting from the trailer. A rear winch mounted in front of the fifth wheel is capable of pulling a combat loaded M1 series tank onto a semi-trailer without using the tank's own power. The winch may also be used for recovery of other vehicles; the oscillating fifth wheel can be adjusted for highway and cross-country use.

D0886 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D0886: TRK, CARGO 22.5 TON, 10X10, LVSR - MKR18

The LVSR Cargo Variant (AMKR-18) replaces the LVS MK18/14 capability. LVSR is a self-loading cargo hauler which transports standardized containers; bulk, break-bulk, palletized cargo, and bridging equipment. The LVSR fulfills the role as the logistics distribution system with the primary mission of the LVSR is to provide bulk transport for the MAGTF.

D1001 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1001: 997 FIELD AMBULANCE

The M997 is capable of transporting up to four litter patients, eight ambulatory patients. The ambulance can be heated, ventilated or air conditioned. For operation in a NBC environment, the M997 is equipped with a Gas-Particulate Filter Unit (GPFU) with heaters capable of supporting up to seven personnel equipped with the M25 series protective masks or M13 series of patient protective masks. The GPFU forces temperature controlled filtered air to the mask face pieces, which increases protection, eases breathing and reduces stress and heat fatigue during extended periods of NBC operation.

D1062 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1062: TRUCK, RTAA, XLWB CARGO, 7 TON, W/O WINCH

The MK27A1 is a 7-ton, 6x6 designed for use on all types of roads, highways and cross-country terrain. It is capable of traversing a 60 percent gradient, a 30 percent side slope up to 15 mph and a 40 percent side slope at 5 mph with its maximum cross country load. The MK27A1 variant is capable of being transported by highway, rail, sea and air. The MK27A1 is the "ready to accept armor (RTAA)" versions of the MK27, which include upgraded cab mounts, armored flooring, upgraded suspension, and air conditioning.

D1063 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1063: TRK, CARGO, RESUPPLY F/HIMARS

HIMARS is a transformational 24 hour, ground-based, responsive General Support / General Support-Reinforcing precision indirect fire support system which accurately engage targets at long ranges (60+ Km) with high volumes of lethal fire under all weather conditions throughout all phases of combat operations ashore. HIMARS is C-130 and amphibious transportable and with precision fires, supports both irregular and traditional warfare. One HIMARS system is defined as one launcher, two re-supply vehicles / trailers and munitions.

D1064 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1064: TRK, FIRE FIGHTING, AIRCRAFT AND STRUCTURE

Designed for aircraft crash and rescue operations. Used to fight other types of fires such as brush and structural fires. Contains s its own pressure pump and fire fighting equipment. Water, foam and halon are carried in tanks built into the truck body. Water or a combination of water and foam can be used to extinguish a fire. Agents are delivered through the cab mounted roof turret, the bumper turret or the hand line. These can be used alone or at the same time. The halon system uses its own hand line. The truck is fully enclosed, insulated and winterized.

D1125 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1125: TRK, UTIL, TOW CARR, W/SA, 2 1/4T, HMMWV (DELETED RFF 1081)

The M1045 is the Tube Launched, Optically-Tracked, Wire-Guided (TOW) missile carrier (with supplemental armor) model of the M998 series of tactical truck designed to provide added ballistic protection to the crew, equipment and ammunition. Designed to carry the M220E2 TOW missile launcher, six TOW missiles and a crew of two. Features a hatch on top of the body and an external mount for the M220E2 TOW launcher. When the VPC cables are connected, traverse is limited to 300 degrees left or right of the vehicle centerline. With the M220E2 installed, elevation is limited to 20 degrees and depression is limited to 10 degrees.

D1158 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1158: TRUCK,UTILITY

The M1123 HMMWV variant replaced the M998 and M1038 variant HMMWVs. The M1123 provides light troop and cargo transportation. Available in two and four person configurations, this model can accept installation of troop seats and other modifications. This variant can be used as the vehicle platform for mobile communication systems as well as other mobile alternate command posts. Marine Armor Kit (MAK) can be installed on M1123, in either two or four door configurations.

D1212 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1212: TRK, WRECKER, 5T, 6X6

The M816 is the wrecker variant of the M809 series of 5 ton trucks. The wrecker is utilized to return disabled trucks for repair and to free mired trucks. It is equipped with a hydraulically powered, engine driven crane, drive shaft driven front winch and rear winch. The front winch is used mainly to free the wrecker when it becomes mired or to assist the rear winch by acting as an anchor point. The rear crane is used for lifting loads up to 20,000 pounds. The crane is utilized in operations such as removing and replacing engines, power packs and gun tubes. For safety reasons, the front winch is restricted to a maximum load of 9,500 pounds.

D1214 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN D1214: TRK, WRECK, LVSR

The MKR15 wrecker is a 10 x 10 truck designed for use on improved roads, highways, and cross-country terrain. The wrecker is designed to operate in a full range of environmental conditions. Each cab has armor incorporated into the cab floor to provide protection from mine blast. Each LVSR variant incorporates a 600-horsepower diesel engine, a seven speed automatic transmission, single-speed transfer case, front tandem steering and driving axles, and rear tridem driving axles of which the two rear most axles steer, 16R20 single radial tires on all axles, and a CTIS.

E0013 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0013: SCOUT SNIPER DAY SCOPE (SSDS)

The Scout Sniper Day Scope (SSDS) is a variable-power scope that provides the Scout Sniper with the capability to clearly, easily, and quickly acquire and engage targets out to the maximum effective range of the host weapon. The SSDS allows for the use of properly matched adjustment cams to fire from 100 yards to the maximum effective range for the M40 firing M118LR ammunition, and the M107 firing MK211 Raufoss ammunition. It is waterproof up to 33 feet and has a first focal plane, mil-dot, Gen II-type reticle.

E0017 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0017: RIFLE COMBAT OPTIC-M4

The AN/PVQ-3 is a fixed 4X optical targeting sight designed for use with service rifles configured with MIL-STD-1913 Rail Adapter System. The sight has an illuminated chevron reticle that incorporates a Bullet Drop Compensator (BDC) out to 800 meters, as well as a horizontal mil-scale graduated in 5 mil increments. The sight incorporates dual-illumination technology, using a combination of fiber optics and self-luminous Tritium.

E0020 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0020: SCOUT-SNIPER MID-RANGE NIGHT SIGHT

The AN/PVS-27 is a lightweight, weapon-mounted, battery-operated, imaging-intensifying device used for detection, identification, and engagement of targets during nighttime and low light conditions. The device attaches to the MIL-STD 1913 rail adapter system directly in front of the Scout Sniper Day Scope (SSDS) and is designed to maintain the boresight of the SSDS and the inherent accuracy of the weapon system.

E0025 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0025: LAUNCHER,GRENADE

The M32A1 MSGL is a lightweight, multi-shot, 40 mm, semi-automatic, shoulder-fired weapon. It is capable of firing all standard Department of Defense Identification Code (DODIC) and NATO standard 40 mm, low-velocity ammunition. The M32A1 MSGL has a six-round cylinder incorporating a revolving action. The cylinder rotates by means of a spring assist. Rotation of the cylinder is controlled by a gas-operated indexing system.

E0036 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0036: MARINE ARTILLERY SURVEY SET (MASS)

The MASS is the streamlined replacement for the Field Artillery Regiment Surveying Set and the Field Artillery Battalion Surveying Set. It consists of legacy equipment and components from those sets, a vehicle, and the Defense Advanced Global Positioning System (GPS) Receiver (DAGR). MASS consist of theodolites which are used to measure angular deviation and vertical interval, range measuring devices and the necessary ancillary equipment required to support the mission.

E0060 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0060: SABER ELECTRICAL CIRCUIT TEST SET (ECIRTS)

Electrical Circuit Test Set (ECIRTS) Tool Kit (ETK) is composed of a Type-4 ECIRTS, a Holdback Fixture, and a Coil Cable Wrench. The Type-4 ECIRTS is designed to test the M41A4 Saber by simulating all current TOW missiles by providing signals and loads to the weapon system that provide Missile ID, Pre-Fire, Fire, and Wire Cutter Squib circuit breakers, and decode the guidance signals. The signal test capability provides troubleshooting of the Saber wiring between the Fire Control Subsystem (FCS) and the missile connector in the traversing unit.

E0088 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0088: M240 DAY OPTIC (MDO)

The SU-260/P is a magnified day optic that aids the Machine Gunner in target detection, recognition, identification, and engagement. The sight provides 6X magnification and uses the Marine Corps' designed reticle that compensates for spindrift and incorporates a Bullet Drop Compensator (BDC). It allows for quick target acquisition at close range, utilizing an integrated Ruggedized Miniature Reflex (RMR) sight.

E0150 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0150: ARMORED VEHICLE, LAUNCHER, BRIDGE

Bridge, Armored Vehicle Launched is mounted on an M60A1 chassis. It provides a transportable bridge that can be launched and retrieved. The mobility and flexibility allows dispersed and concentrated combat vehicle support over great distances. The armor provides maximum ballistic protection for the crew and is suitable for a nuclear, biological, and/or chemical environment.

E0190 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0190: CARBINE, CQBW, 5.56MM

The M4A1 is a lightweight, air-cooled, gas-operated, magazine-fed, shoulder-fired weapon designed for automatic or semi-automatic (single shots) fire by using the selector lever. The weapon has a fully adjustable rear sight and is configured with a flat-top upper receiver and barrel assembly with a detachable carrying handle, integral rear aperture sight, and a modified compensator that allows attachment of a sound suppressor. The M4A1 Carbine's buttstock has four positions: closed, 1/2 open, 3/4 open, and full open.

E0207 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0207: JAVELIN

The Javelin Weapon System, Command Launch Unit (CLU), M98A2, is a medium-range, man-portable, recoilless, anti-tank assault weapon capable of defeating current and projected enemy armor and hovering enemy helicopters. The Javelin can be used during the day or night or during degraded weather conditions, including electronic and electro-optical countermeasures. The missile has a Top Attack and a Direct Attack mode to defeat enemy armor and hovering enemy helicopters.

E0330 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0330: EQUIPMENT SET, NIGHT VISION

Guided Missile System, TOW 2 Weapon System, M220A3 is a portable wire-linked, heavy, anti-tank weapon designed to defeat armored vehicles and other hardened targets, such as field fortifications. It operates day or night under all weather conditions and provides a high first-round hit capability against both mobile and stationary targets. The TOW 2 can be tripod mounted, but is normally installed in the turret of the Light Armored Vehicle-Anti Tank (LAV-AT). It is capable of firing the complete BGM-71 family of missiles (to include RF-linked missiles).

E0671 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0671: HOWITZER, LTWT, TOWED, 155MM

The M777A2 Howitzer is an extended-range weapon that can be towed by muzzle tow with any four-wheel drive vehicle over 2.5 tons. The Howitzer is also transportable by rotary fixed-wing aircraft. The body has trails, spades, and stabilizers that can be folded for transportation and storage. The Howitzer has a low profile, may be emplaced rapidly, and has a 6,400-mil speed shift capability.

E0892 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0892: LAUNCHER, GRENADE, 40MM

The M203 40 mm Grenade Launcher is used while attached to a M16A2 rifle. It is a lightweight, compact, breech-loading, pump-action, single-shot launcher. Consists of a hand guard and sight assembly with an adjustable metallic folding blade; sight assembly; plastic handguard; and receiver assembly housing the barrel latch, barrel stop, and firing mechanism. Capable of firing a variety of 40 mm ammunition. The M203A1 40 mm Grenade Launcher is used while attached to the M4, 5.56 mm Carbine Series. It is a lightweight, compact, breech-loading, pump-action, single-shot launcher that is functionally identical to the M203.

E0915 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0915: LAUNCHER, ROCKET, ASSAULT, 83MM, MK153

The Launcher, Assault, Rocket, 83 mm (SMAW), MK 153 Mod 0, is a simple-to-use, man-portable assault weapon employed against buildings, bunkers, field fortifications, armor vehicles, and other targets. The SMAW is capable of firing both tactical and practice rockets through the launch tube and tracer cartridges ballistically matched to these rockets through the spotting rifle. The SMAW launcher consists of the launch tube, 9 mm spotting rifle, electromechanical trigger mechanism, open battle sights, and a sight mount.

E0947 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0947: LAV, LIGHT ASSAULT, 25MM

Armed with the stabilized M242, 25 mm Automatic Cannon and a coaxially mounted M240, 7.62 mm Machine Gun in a two-man turret. The LAV-25A1 delivers accurate and destructive direct fire against enemy personnel, lightly armored vehicles, and materiel targets. Its capability to rapidly deploy/redeploy troops within the battle area permits their arrival at the point of commitment with reduced casualties and fatigue. An Auxiliary Power Unit (APU) supplies power when the LAV-25A1 is operational with the engine shut down. The LAV-25A1 carries a crew of three (driver, gunner, and commander) plus six combat-equipped infantrymen.

E0980 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0980: MACHINE GUN, CAL .50, BROWNING, HB FLEXIBLE

The M2 is an automatic, recoil-operated, disintegrating metallic, link-belt fed, air-cooled machine gun with an adjustable headspace that is crew-transportable. By repositioning some of the component parts, ammunition may be fed from either the left or the right side. The metallic link-belt is used to feed the ammunition into the weapon. This gun has a back plate with spade grips, trigger, safety selector, and bolt latch release. This gun may be mounted on most vehicles and tanks as an anti-personnel and anti-aircraft weapon. The weapon can be used in conjunction with current HMMWV MCTAG: OGPK configurations.

E0984 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0984: MACHINE GUN, CAL .50

The M48 Turret Type is an air-cooled, recoil-operated, alternate-feed, automatic, crew-served weapon. The weapon is mounted on the M1 and M1A1 Abrams main battle tank commander's station M88A2 recovery vehicle. It provides automatic weapon suppression fire for offensive and defensive purposes. This weapon can be used effectively against personnel, light armored vehicles, and low, slow-flying aircraft.

E0994 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0994: MACHINE GUN, GRENADE (MK 19 40MM MOD 3 W/BKT)

The MK19 W/BKT is an air-cooled, disintegrating metallic link-belt fed, blowback-operated, fully automatic weapon and is crew-transportable. It fires a variety of 40 mm grenades. The M430 (HEDP) 40 mm grenade will pierce armor up to 2 inches thick (at zero degrees obliquity) and will produce fragments to kill personnel within 5 meters and wound personnel within 15 meters of the point of impact. The weapon is used in conjunction with current HMMWV MCTAG: OGPK configurations.

E0996 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E0996: BLADE, MINE CLEARING

The Mine Clearing Blade (MCB), when mounted to the front of the M1 or M1A1 Abrams Tank, is used to clear 8-, 10- and 12-inch deep mines from a tank's path. As the tank pushes the MCB through a minefield, loose dirt and mines are rolled up onto moldboards and then pushed to the sides of tracks. A chain and dogbone attached between the moldboards detonate any tilt rod mines in the center lane. A control box located in the driver's compartment provides operator control for raising and lowering the moldboards. A manual release system allows moldboards to be lowered to the plowing position if the electrical system fails.

E1030 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1030: TARGET DESIGNATOR II, LASER, GROUND (GLTD II)

The GLTD II is a compact, lightweight, man portable, laser designator and rangefinder. Developed to enable combat soldiers to direct laser-guided munitions, such as Hellfire missiles and Laser Spot Tracking munitions. The GLTD II can be implemented as part of a sophisticated digitized fire control system with thermal or image-intensified sights.

E1065 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1065: MORTAR,60 MILLIMETE

The M224A1 is a smooth bore, muzzle-loading, high-angle-of-fire weapon. Its design improvement from the legacy M224 system is a barrel composed of inconel, a lightweight and extremely durable nickel alloy. In addition, the bipod was constructed from lighter materials and components and an improved forging process allowed for weight reduction of the baseplate.

E1095 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1095: MORTAR, MEDIUM, 81MM, EXTENDED RANGE

The M252 81 mm Mortar is a crew-served, lightweight mortar that is highly accurate and provides for a range of 4,500 to 5,650 meters. The cannon has a removable breech plug and firing pin. The muzzle end has a short tapered lead-in for the cartridge and Blast Attenuator Device (BAD). The breech end is finned for better cooling. Weapon Record Book, Part II (NAVMC 10558A) is provided with the Mortar.

E1154 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1154: INTENSIFIER, IMAGE, NIGHT VISION

The AN/PVS-14 is a lightweight, hand-held, head-mounted, or helmet-mounted night vision system that provides night vision by amplifying ambient light from the night sky. The device uses third generation (GEN III) image intensification technology and is equipped with an infrared illuminator, low-battery indicator, and gain control.

E1159 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1159: SIGHT, NIGHT VISION, WEAPON, CREW SERVED

The AN/TVS-5A is a weapon-mountable, battery-operated, third generation (GEN III) image-intensifying night sight. The device amplifies reflected ambient light such as moonlight, starlight, and sky glow so that the viewed scene becomes visible to the operator. The AN/TVS-5A can be mounted on the M2 .50 Caliber Machine Gun and the MK 19 40 mm Machine Gun.

E1160 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1160: SIGHT, NIGHT VISION, MINI 4.5X

The AN/PVS-17C is a lightweight, compact, weapon-mountable night sight that utilizes GEN III image intensification technology. The device utilizes a circle dot reticle and has a 4.5X magnification, fixed-focus objective lens. Operator controls are provided for power (OFF/ON), reticle brightness, eyepiece focus, reticle windage and elevation reticle adjustments. The sight is submersible to 66 feet and comes with a MIL-STD- 1913 rail grabber interface, with a double throw lever mount for mounting to weapons. The AN/PVS-17C is intended for mount on the M249 Squad Automatic Weapon (SAW) and M240G Medium Machine Gun.

E1460 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1460: RIFLE,7.62 MILLIMET

The M40A5 is a heavy barrel, bolt-action, manually operated, magazine-fed, shoulder-fired weapon with an optical sight. The M40A5 closed-bolt design offers a high degree of accuracy and control while providing a greater degree of safety. An accessory rail has been added on at the front of the stock providing more area to mount accessories. The M40A5 is equipped with a muzzle break and suppressor.

E1761 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1761: SHOTGUN, 12 GAUGE, COMBAT

The M1014 Combat Shotgun, is a semi-automatic weapon with a fixed, tubular magazine. It functions using the Auto Regulating Gas Operated (ARGO) Twin Operating System with rotating bolt head and dual-locking lugs. It is self-regulated for cartridges of varying length and power levels and functions reliably under all environmental conditions. All controls and sling attachment points allow for ambidextrous operation.

E1762 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1762: SHOTGUN 12 GA

The Mossberg 500A2 is a manually operated, repeating, magazine-fed, shoulder-fired weapon. The action lock lever allows the action to be unlocked without engaging the trigger and is located on the right side of the trigger group. When in the locked ON position, the safety prevents the firing of the weapon. When the safety is OFF, a red dot will be exposed, indicating the weapon is fireable. The trigger controls the firing of the weapon. The foreend assembly is used to open and close the bolt assembly, permitting loading and firing of the weapon, and ejection of the spent cartridge.

E1779 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1779: SIGHT, GRENADE LAUNCHER

The AN/PSQ-18A is a weapon-mounted, enhanced aiming device designed to enable Marines to rapidly and precisely fire the M203 in daylight, low-light, and night conditions. It possess integrated infrared (IR) aim and illumination lasers for nighttime employment, a built-in range scale, an anti-cant indicator, and integral iron sight for daytime employment. The AN/PSQ-18A provides for increased firing accuracy over quadrant and leaf sight systems, from 40 meters to 400 meters.

E1798 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1798: ILLUMINATOR,INFRARE

The AN/PEQ-15 is a weapon-mountable, multifunction, Class 3B laser device that emits visible and infrared (IR) light for precise weapon aiming and target/area illumination. The visible aiming laser assists in boresighting the device and provides for active target acquisition in low-light and close quarters combat situations without the need for night vision devices. The IR aim and illumination lasers provide for active, covert target acquisition in low light or complete darkness when used in conjunction with image intensifying night vision devices. The AN/PEQ-15 and the AN/PEQ-16A have replaced the AN/PEQ-2A.

E1888 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1888: TANK, COMBAT, FT, 120MM GUN

Tank, Combat, Full-Tracked, 120 mm Gun, M1A1 is a heavily armored, land combat vehicle operated by a four-man crew consisting of the commander, gunner, loader, and driver. It is powered by a 1,500 horsepower turbine engine, an automatic transmission, and two final drives. The main armament on the vehicle is the 120 mm M256 main gun mounted on a traversable turret. Additional fire power is provided by a coaxial-mounted 7.62 mm M240 machine gun, a 7.62 mm M240 at the loader's station, and a .50-caliber M48 machine gun mounted at the Commander's Weapon Station.

E1975 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1975: SIGHT, WEAPON, THERMAL, MEDIUM (MTWS) AN/PAS-13CV2

TWS is a self-contained, lightweight, compact, durable, battery-operated, infrared imaging weapon sight used for target acquisition and engagement. It can be used in limited visibility conditions such as darkness, smoke, fog, dust and haze, and is effective during daylight hours. The MWTS and HWTS have the same design, but have different telescope and software. The system comes with a MIL-STD-1913 rail grabber interface. The AN/PAS-13D (V)2 can be mounted on the M240B Medium Machine Gun and the M249 Squad Automatic Weapon. The AN/PAS-13D (V)3 can be mounted on the M2 Heavy Machine Gun and the MK19 Machine Gun.

E1978 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E1978: SIGHT,THERMAL

The AN/PAS-22 is a stand-alone, battery operated, hand-held portable thermal imaging binocular, used to observe/orient, detect and identify targets, conduct surveillance, long-range observation and reconnaissance, and assist in engaging targets during all lighting conditions. The AN/PAS-22 can be used under conditions of limited visibility and battlefield obscurants such as smoke, fog, and sandstorms. The AN/PAS-22 is able to detect man-sized targets at a range of 3,500 meters, vehicle targets at 10,000 meters, and integrates via the MIL-STD 1913 rail grabber interface with the AN/PEQ-13 Common Laser Range Finder (CLRF).

E5002 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN E5002: TRAINER LAUNCHER F/LAWS

Launcher, Trainer, Light Anti-Tank Weapon (LAW), M72AS, is a reusable trainer which fires the 21 mm Sub-Caliber Trainer Rocket (Department of Defense Identification Code [DODIC] HA21). There is no limitation of use of the sub-caliber rockets in the trainer if properly maintained and stored. The LAW Trainer is also equipped with a MIL-STD 1913 rail in order to mount a variety of night vision devices.
