Ground Equipment Reset Playbook

April 2, 2012

Version 20120402

Sample Reset Playbook Data Sheet

A8032 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

1

TAMCN = A8032: SECURITY EQP, SPEECH, TACT, HALF-DUP, W-B AIRBORNE

The Speech Security Equipment (VINSON), TSEC/KY-58-2, -58-3, -58-4, and -58-5 are members of the VINSON family. The VINSON family consists of Wide Band Secure Voice (WBSV) units developed by the National Security Agency to provide line of sight half-duplex voice and data encryption at 16 kbps. The TSEC/KY-58-2, -58-3, -58-4, and -58-5 provides security for AM/FM, VHF, UHF, half-duplex Public Telephone and Telegraph combat net radios and tactical wireline systems when used with the HYX-57.

Description of Playbook Contents:

1. **Strategic View of Equipment:** Provides general information on the equipment

   A. Identifies whether the TAMCN is listed on MARES/MEE/ MEF Top 50
   B. Requirements Data is from TFSMS.
   C. O/H Data from SASSY.
   D. Shortfall/Excess is calculated as the difference between the O/H and AAO's. This shows the relative health of the enterprise for this item.

2. **Reset Strategy & Plan:** Provides information on reset strategies and forecasted categories for Equipment in OEF. Items A through C are collected from MCSC. The forecasted categories were calculated from the information provided.

   A. If there are multiple variants of a specific TAMCN in OEF, they are broken out by NSN along with their quantities. The cumulative quantity of the O/H at the NSN level matches with the total O/H from SASSY Sept 2011 TAMCN data.
   B. Reset strategies broken down by NSN. These strategies represent best estimates of the level of repair necessary to reset the equipment.
   C. Identifies additional attributes of the item.
   D. Forecasted categories were calculated using: (1) the reset strategies to estimate the condition of the equipment when it returns to CONUS and (2) the forecasted final distribution information that was provided by MCLC. In this example we can see that two pieces of equipment are selected to fill shortfalls at I MEF but are predicted to require depot level maintenance, and therefore they will become CAT II.
   E. General information pertaining to reset of the item.

3. **Operational View of the R2 Distribution Plan:**

   A. LTI Disposition Information should be used to determine disposition instructions once a condition assessment of the item is performed. It is possible that once performed, the LTI will suggest a disposition that is different from the forecasted categories due to estimation error in the reset strategies.
   B&C. Lift criteria and transportation information that shows options for lift out of theater.
   D. Forecasted final distribution provided by MCLC from the Equipment Sourcing Tool (EST).
   E. Shows the footprint of the item.
   F. Shows constraints for this piece of equipment during transport to CONUS. If the Item has associated TAMCNs, the user is instructed to go to the appendix, where more specific information will be displayed.

RESET PLAYBOOK UPDATES

Current Playbook

- Updated TFSMS AAO Requirements Data Pull March 27, 2012

- Added the following TAMCNs as SAC-3 items:

A0012 CHARGER, BATTERY (SOLDIER PORTABLE CHARGER)
A7005 ANALYZER,SPECTRUM
A7084 ANALYZER, NETWORK
A8023 TRANSFER UNIT,CRYPT
B1570 PUMPING ASSEMBLY,FL
B2210 TOOL KIT,CARPENTER'
E1065 MORTAR,60 MILLIMETER

- Utilizing MCLC Net Asset Posture Data to articulate On Hand equipment quantities March 21, 2012. The following NAP DODAACs were included:

M01148	M94168	M95102	M95117	M95203	M95307	M95319	MMFAF8	MMX804

A0015 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0015: WORKSTATION, CAPABILITY, VIDEO EXPLOITATION

MSIDS is the only FoS that provides organic tactical digital imagery collection, transmission and receiving capability to the MAGTF Commander. MSIDS is comprised of components necessary to enable Marines of all echelons within the MEF, down to and including battalions and squadrons to capture, manipulate, annotate, transmit or receive photo and video images in NRT, internally with subordinate commands.

A0021 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0021: COMM DATA LINK SYTEM (CDLS)

The AN/TYQ-101A is a modular suite of Commercial-Off-The-Shelf (COTS) and Government-Off-The-Shelf (GOTS) computer and communications equipment that is mounted in a Light Weight Multipurpose Shelter (LMS), mounted on a Heavy Variant-High Mobility Multipurpose Wheeled Vehicle (H-HMMWV). The AN/TYQ-101A is an automated interface system, which provide ground and correlated air situation display using information received from multiple intelligence, (Deployable Common Ground Station, etc.) and operation (E-3A, E-2C, Air Operations Center, Control and Reporting Center, etc.) sources.

Notes: DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter plus the HMMWV may be power washed. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0025 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0025: COMMUNICATIONS PLATFORM, AIR DEFENSE (ADCP)

The AN/MSQ-124 is composed of radio and computer equipment housed in a Lightweight Multipurpose Shelter, mounted on a heavy High Mobility Multipurpose Wheeled Vehicle. The AN/MSQ-124 is powered by a towed generator. The AN/MSQ-124 receives Tactical Ballistic Missile (TBM) data from the AN/TPS-59(V)3 radar and performs a TBM Reporting Responsibility function on the TADIL-J network. The AN/MSQ-124 also distributes Air Breathing Threat data to Short Range Air Defense units. The AN/MSQ-124 possesses an organic voice communications capability via radios and telephones.

A0059 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0059: DIGITAL TERRIAN ANALYSIS MAPPING SYSTEMS LIGHT

The DTAMS-L is an Intel-based portable system that runs the Windows XP Professional operating system. Its role is to augment the DTAMS configuration. The deployable workstation provides geospatial intelligence analysis capabilities for small unit operations in a defined area of interest. The DTAMS-L hosts an internal 120GB hard drive and an external drive yielding approximately 2TB of available on-line storage. Each DTAMS-L is supplied with an additional internal and external HDD to be used for classified processing. Backup and archival storage is available through the use of a FDD and a DVD +/- R/RW.

Notes: This system is on schedule to be refreshed 100% in FY12. DO NOT POWER WASH THE SYSTEM. The transit cases can be washed and dried completely prior to loading sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe the system clean and filters may be removed. Upon receiving item from theater, owning unit needs to complete a detailed inventory and a detailed maintenance assessment. No longer procurable.

Notes: Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. Conduct all repairs/maintenance as required. TAMCN are MARES reportable items, ensure gains and losses are incorporated into unit SORTS reporting. Owning unit will then inventory SL-3 and complete a detailed maintenance assessment. A missing SL-3 listing will be provided to MCSC for determination of re-procurement or cross-leveling of existing spares inventory. If maintenance is beyond the unit capability, an ERO will be opened and the CLS rep will be contacted.

A0068 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0068: RADIO SET, TACTICAL LONG HAUL DIGITAL LINK-11, AN/GRC-256

The AN/GRC-256 Radio Set consists of a Digital HF/SSB Transceiver (RT-9000) and a Solid State 500 Watt Linear Power Amplifier (LPA-9500). Both the RT and the LPA with selected EPROMS make them Marine Corps unique items. The RT-9000 is capable of providing communications from 1.6 to 29.99999 MHz transmit and 100 kHz to 29.99999 MHz receive.

Notes: Owning unit will remove SSRI, UURI, radios, and crypto equipment and coordinate with program office and item manager for item to be sent through IROAN/SLEP and rebuild at depot. Any missing or damaged SSRI, UURI, radios, and crypto will be repaired/replaced through organic or depot maintenance cycle as appropriate. DO NOT POWER WASH. Radio contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

Notes: It was basically a mobile workshop (HMMWV with a Gitchner Shelter) to repair mechanical and electronic components of the Avenger system. This system was taken out of the OpFors years ago. The TAMCN needs to be archived and done away with. Problem is that the net asset posture shows 2 - one at II MEF and one in the War Reserve. This has to go away before TFSMS will let it be archived. By rights of anti-air weapons, the GBAD folks would own this. I suggest we turn it over to the TFSMS support contracts that work for AC LCL and let them get rid of it for us.

Notes: Owning unit will then inventory SL-3 and complete a detailed maintenance assessment. Missing SL-3 will be ordered through organic supply system. If maintenance is beyond the unit capablitiy, a WIR will be submitted. DO NOT POWER WASH. Use damp rags and compressed air to clean this TAMCN and its equipment. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches. NSN ending in 4768 will get upgraded to 3681.

Notes: Item should be identified with a 1018 tag and the Principle End-Item manager notified. The PEI manager will use it to fill equipment backorders throughout the Marine Corps. Do Not Power Wash. Use damp rags and compressed air to clean this TAMCN and associated SL-3 equipment. Recommend that the owning unit complete a detailed SL-3 inventory and maintenance assessment. This will show how much organic supply support will be needed.

A0121 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0121: MICRO UNMANNED AERIAL VEHICLE (MUAV)

The Battlefield Air Targeting Micro Aerial Vehicle (WASP) is a hand-launched reconnaissance and surveillance tool. The Wasp Air Vehicle transmits live airborne video images and location information to a Ground Control Station (GCS). This capability enables operators to navigate, search for targets, recognize terrain, and record all information for analysis.

TAMCN = A0134: WIRELESS POINT TO P

LSWAN (Ku VSAT) is a small, lightweight, hand-portable, low cost satellite terminal that provides NIPRNET/SIPRNET capability. The Ku VSAT can be quickly set up to tie into the existing commercial Ku infrastructure as an alternate source of transmission for high bandwidth intensive capabilities. LSWAN is an integrated COTS solution. The major functional groups of the LSWAN package are: Ku VSAT antenna, power amplifier, modem, routers, and KG-175s. The Ku VSAT terminal and baseband equipment are packaged in HMMWV transportable transit cases.

A0139 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0139: RADIO SET, AN/TRC-209

The AN/TRC-209 is the HF/VHF transit case transceiver system using the AN/PRC-150(C). It provides high output power (150 watts in HF, 60 watts in VHF) in a series of transportable cases allowing for use in various situations. Key features include: shock mounting of all components; separate HF and VHF antenna outputs; and DC power filtering for supply noise and voltage spike suppression.

Notes: Return to owning unit but take out of service until maintenance is completed. DO NOT POWER WASH. Item contains sensitive electronics, computer, and software which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0194 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0194: PERSISTENT SURVEILLENCE SYSTEM (G-BOSS) (80' TOWER)

A self-erecting, trailer-mounted tower serves as the base of the G-BOSS. It is designed to provide a stable, elevated platform for the sensor suite and communication devices. Cameras are mounted on a self erecting, telescoping tower. Other associated equipment includes capability for video capture, storage, transmission, and power generation.

Notes: Systems will be shipped to NSWC Crane, where they will be refurbished and tested to unsure they are Condition Code A ready to issue as an operational system. NSWC Crane is currently serving the the supply chain manager for G-BOSS fielded system. Should be shipped with B0077. Prior to wash down system should be in stowed and/or shipping configuration with all connector caps installed. All system components require no special considerations for agricultural wash down. The system is designed to withstand wet environmental conditions.There are several subsystems associated with this TAM that currently have their own TAMCN or will probably have one prior to IOC of Increment 2 of the G-BOSS € Acquistion Program. Examples of subsystems associated with this TAMCN that currently have their own TAMCN are the MEP generators and TRSS. Examples of subsystems associated with this TAMCN that will probably have a TAMCN in the future are COMM Suites, MSTAR Ground Radar, VideoScout, etc..

TAMCN = A0241: SATELLITE COMMUNICATION SUBSYSTEM

SWAN is an integrated Commercial Off-the-Shelf (COTS) solution utilizing a Very Small Aperture Terminal (VSAT) and networking components. SWAN is an On-the-Pause (OTP) communications asset and can be set up in 30 minutes or less. There are multiple SWAN system variants fielded based off Urgent Universal Need Statements (U-UNS) submitted by Marine Corps units.

Notes: Systems will be shipped to NSWC Crane through MCLC, where they will be refurbished and tested to ensure they are Condition Code A ready to issue as an operational system. NSWC Crane is currently serving the the supply chain manager for G-BOSS fielded system. Prior to wash down system should be in stowed and/or shipping configuration. All system components require no special considerations for agricultural wash down. The system is designed to withstand wet environmental conditions.There are several subsystems associated with this TAM that currently have their own TAMCN or will probably have one prior to IOC of Increment 2 of the G-BOSS € Acquistion Program. Examples of subsystems associated with this TAMCN that currently have their own TAMCN are the MEP generators and TRSS. Examples of subsystems associated with this TAMCN that will probably have a TAMCN in the future are COMM Suites, MSTAR Ground Radar, VideoScout, etc..

Notes: Systems will be shipped to NSWC Crane through MCLC, where they will be refurbished and tested to ensure they are Condition Code A ready to issue as an operational system. NSWC Crane is currently serving the the supply chain manager for G-BOSS fielded system. All system components require no special considerations for agricultural wash down. The system is designed to withstand wet environmental conditions.There are several subsystems associated with this TAM that currently have their own TAMCN or will probably have one prior to IOC of Increment 2 of the G-BOSS € Acquistion Program. Examples of subsystems associated with this TAMCN that currently have their own TAMCN are the MEP generators and TRSS. Examples of subsystems associated with this TAMCN that will probably have a TAMCN in the future are COMM Suites, MSTAR Ground Radar, VideoScout, etc..

A0299 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0299: PRINTER, PORTABLE

AIT devices enable and facilitate data collection and transmission to Automated Information Systems (AISs). AIT devices improve the Marine Corps' logistical business processes and enhance warfighting capabilities by facilitating the collection of initial source data, reducing processing times and improving data accuracy. The AIT program is currently focused on implementing barcode technology - both linear and 2D barcodes and integrating Radio Frequency Data Collection (RFDC) technology to allow near real time processing of data. Successful AIT implementation is dependent on the AIT software development expertise of our information system developers and the ability of the user community to have well documented AIT requirements.

A0331 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0331: RADIO SET, LOW PROFILE SINGLE VEHICLE ADAPTER, 50-WATT (VRC)

The AN/VRC-113(C) operates over a 30-512 MHz frequency range with either Frequency Modulated (FM), or Amplitude Modulated (AM) Radio Frequency (RF) output, with a user-selectable power output from 0.1 to 5 watts (depending on operating mode). The radio can interoperate with both 12 kbps (FED-STD-1023) and 16 kbps (VINSON-compatible) equipment. The Basic radio provides the following capabilities: SINCGARS, HAVEQUICK, ANDVT, retransmission, and High Throughput Waveform (HTW).

A0351 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0351: REMOTE CONTROL RADI

System Description: The RF-7800R-RC Remote Control Device provides full remote control capability for the AN/PRC-117F, AN/PRC-117G, AN/PRC-150, and the AN/PRC-152 radios. The package includes two remote control units whose modular design allows either unit to function as the Local Control Unit (LCU) or the Remote Control Unit (RCU). All radio functions controlled by the Keypad Display Unit (KDU) can also be controlled by the RCU, including Automatic Link Establishment (ALE), frequency hopping and modem selections. The system provides TX/RX voice and data and controls legacy functions using field wire, but also adds capabilities/interfaces for Ethernet and fiber optic. Allows for 3.5km of separation of radio and operator providing enhanced safety and transmission security.

A0504 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0504: DTAMS

The Digital Terrain Analysis Mapping System (DTAMS), is a transportable subsystem of the Topographic Set. The DTAMS is housed within five rugged transport cases, each capable of two-man transport. Included within these five cases are Sun Spark workstations with CD ROM as well as high capacity hard disk drives and an 8 MM tape drive.

A0652 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0652: CONVERTER SET, FIBER OPTIC

The Converter Set, Fiber Optic, AN/GSC-54 when used with a Tactical Fiber Optic Cable Assembly (TFOCA), forms a part of the Fiber Optic Cable System (FOCS). The FOCS provides a full duplex fiber optic transmission link between a compatible pair of TRI-TAC equipment. The AN/GSC-54 and the FOCA configuration provides an optical communication link for up to 6 kilometers in length, operating at group data rates ranging from 72 kilobits per second to 4,608 kilobits per second.

A0872 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0872: SERVER, INTEL OPS(IOS-OPS)

The Intelligence Analysis System Family of Systems (IAS FoS) uses a three-tiered approach for receiving, parsing, analyzing, and disseminating fused all-source Intelligence data. The first tier, the Marine Expeditionary Force IAS (MEF IAS), is a mobile system that supports the MEF Command Element. The second tier, the Intelligence Operations Server (IOSv2), is a team portable system designed to support the Intelligence Operations of the Major Subordinate Commands (MSC). The third tier, the Intelligence Operations Workstation (IOW), serves as the Intelligence link for the battalion and squadron commands to higher headquarters or as a stand-alone system.

A0879 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0879: EXPLOITATION GROUP, TACTICAL, MAIN (TEG-M)

The TEG system is the only tactical imagery exploitation system in the USMC and is one of the five systems comprising the DCGS-MC. It is made up of two modular and scaleable echelon-tailored configurations: the TEG-Main (TEG-M) and the TEG-Remote Work Station.

A0880 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0880: AN/UPX-37 INTERROGATOR SET

The Interrogator, Digital, AN/UPX-37 Identification Friend or Foe (IFF) Interrogator has replaced the AN/UPX-27 IFF Interrogators. It will be used for Mark XII and Next Generation IFF processing including Mode S and Mode 5. Its modular/digital architecture affords customized configurations and performance optimization for most applications including Air Defense, Weapon Systems, Air Traffic Control and Range Instrumentation. Digital target reports can be provided in addition to wide band video for subsequent passive/active decoding.

A0882 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0882: JT TACT INFO DISTR SYS (JTIDS)

The Class 2 JTIDS radio terminal is a multi-microprocessor controlled system combining radio, modem, message processor, and message switching system. The JTIDS terminal operates between 960 and 1215 MHz, frequency hopping 77,000 times per second. The JTIDS employs direct sequence frequency spreading as a further anti-jamming measure. The terminal is capable of data transfer at a rate of 115,000 bps and transmit power of 200 watts.

Notes: Return item to owning unit but take out of service until maintenance is completed. Item must be put through maintenance before placing into service at owning unit. Cannot be DRMO'd in theater. DO NOT POWER WASH. Item contains sensitive electronics, radios, computers, and software which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A0892 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A0892: FASCIMILE SET, BLACKJACK

The Blackjack Facsimile Set, AN/UXC-10 is a self-contained, portable, rugged tactical multifunctional system for use in harsh field environments. It withstands the toughest military applications, allowing installation in tracked and wheeled vehicles, aircraft and ships. AN/UXC-10 receives/sends data at 64 kbps-transmission rate and provides photographic quality imagery far superior to typical half tones dithered technology. The AN/UXC-10 is a North Atlantic Treaty Organization/Military standard digital facsimile, scanner, printer, and copier.

A1221 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A1221: MONITOR, PORTABLE, HAND HELD, AN/USQ-121

Tactical Remote Sensor Systems (TRSS) are systems that provide the capability for all-weather remote monitoring of activity within and near a given objective area. At a minimum, TRSS is capable of detecting human activity and/or the presence and movement of vehicles, providing real time, near-real time, or non-real time monitoring of sensors ashore and/or over the horizon. Monitoring equipment is lightweight and mobile to support fast-moving amphibious and expeditionary operations. Individual sensors can be emplaced by air or ground forces. Sensors and relays have sufficient power sources to operate continuously for 30 days.

Notes: Rockwell Collins performs repairs. Do not pressure wash. Only use fresh non potable water, do not use saltwater. The corrosion from the saltwater will render the weapon system non mission capable. All information for identified TAMCN A1260 is DAGR; PLGR is obsolete. Must be zeroized IAW TM 09880C-OR. Pack individually IAW MILSTD to avoid damage.

A2079 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A2079: RADIO SET, MANPACK

The Radio Set, Manpack, AN/PRC-119F operates as a ground-based manpack radio for tactical communication ofvoice frequency, Frequency Shift Keying (FSK), or digital data. Communication can be secured and/or frequencyhopped for Communications Security (COMSEC) or Electronic Counter-Countermeasures (ECCM) purposes. TheAN/PRC-119F incorporated the technological advances of the RT-1523E(C)/U to support enhanced transmissionand reception of synchronous and asynchronous data. RT-1523E(C)/U improvements include substantial decreasein physical size and weight, an embedded battery box for manpack operation, extended battery life and internalmounted options for a Global Positioning System (GPS) receiver and a Network Access Unit (NAU).

Notes: Power washing may be completed on the inside and outside of this item. Care should be taken around power outlets and wiring to prevent damage. Unservicable outlets will be replaced during rebuild as well as the wiring. Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches.

A2300 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A2300: RADIO REPEATER SET

Tactical Remote Sensor Systems (TRSS) are systems that provide the capability for all-weather remote monitoring of activity within and near a given objective area. At a minimum, TRSS is capable of detecting human activity and/or the presence and movement of vehicles, providing real time, near-real time, or non-real time monitoring of sensors ashore and/or over the horizon. Monitoring equipment is lightweight and mobile to support fast-moving amphibious and expeditionary operations. Individual sensors can be emplaced by air or ground forces. Sensors and relays have sufficient power sources to operate continuously for 30 days. TRSS is employed by the Marine Corps Ground Sensor Platoon.

Notes: The MEFs SSP are the field level maintainers of this equipment and all TRSS gear considered "mission capable" should be sent directly to them for any additional minor repairs and should then be reissued to fill home station shortfalls. Else, the gear should be sent to LOGCOM for repair or disposal. The exterior of the vehicle can be powerwashed, but the electronic gear within the shelter should NOT be agriculturally washed. Should the electronic equipment within the TAMCN be powerwashed it would be ruined beyond economical repair and would have to be reprocured. Recommend no local nationals transport this gear as it contains equipment that is considered highly pilferable.

A2333 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A2333: SHELTER, TACTICAL, EXPANDABLE, TWO-SIDED

Representative Picture

The S-786/G Two-Sided Expandable Tactical Shelter is a self-contained transportable multi-application utility shelter. As a member of family of standard rigid wall International Standard Organizational (ISO) shelters, it is equipped with standard ISO fittings. It is also equipped with mobilizer fittings (for mobilizer transportation) and built-in fork lift provisions. It is designed for all weather operation, and has an environmentally controlled interior, rigid wall construction, and external electrical power connection. Its design incorporates a door activated blackout switch to facilitate operation under blackout conditions.

A2534 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A2534: DATA DISTRIBUTION

The Data Distribution System, known as Tactical Data Network (TDN) Server, augments existing Marine Air-Ground Task Force (MAGTF) tactical communications infrastructure to provide the MAGTF Commander an integrated data network. This data network supports MAGTF Tactical Data Systems (TDSs) and the Defense Message System (DMS) by providing a network of communication nodes (gateways & servers) interconnected with one another and their subscribers via a combination of common user long haul transmission systems, local area networks (LANs), the Enhanced Position Location Reporting System (PLRS), and switch telephone systems.

Notes: Upon receiving item from theater, owning unit needs to complete a detailed SL-3 inventory and a detailed maintenance assessment. The inventory and assessment will drive the amount of organic supply support needed (i.e. replacing SL-3), organic maintenance (i.e. radio maintenance, cable maintenance), and depot maintenance (i.e. IROAN). The detailed assessment will assist in preparing the depot for incoming work and alleviate overflow headaches. DO NOT POWER WASH INSIDE OF SHELTER. Interior of shelter contains sensitive electronics which water can damage. Use compressed air and a vacuum to dust and clean. Damp rags may be used to wipe areas clean. The exterior of the shelter plus the HMMWV may be power washed.

A7001 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A7001: TEST SET, OPTICAL POWER

The Optical Loss Test Set is used to perform precise optical measurements in the field. The test set is composed of a power meter (Techlite Model PX-B220) and two different light sources (Techlite model numbers PX-C202 and PX-C205). The set is used to determine the level of optical power being emitted from a transmitter and to perform fiber loss measurements or splice tuning operations of current and future fiber optic cables. The test set also gives the technician the ability to determine power loss in fiber, connectors, attenuators, or other passive optical components.

A7005 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A7005: ANALYZER,SPECTRUM

These are Micro Wave spectrum analyzers that operate over the freq ranges of 9 kHz to 40 GHz with pre-selection to at least 26.5 GHz. They include synthesized tuning and built in frequency counters, marker-aided frequency and amplitude measurements (relative and absolute) of RF and microwave signals, and digital trace and signal storage.

A7009 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A7009: ANALYZER, SPECTRUM FST-6-NTG3(CREW)

The FSH6-NTG/K-6NUSMC Spectrum Analyzer is a wide band, very sensitive receiver. It works on the principle of "super heterodyne receiver" to convert higher frequencies (normally ranging up to several 10s of GHz) to measurable quantities. The received frequency spectrum is slowly swept through a range of pre-selected frequencies, converting the selected frequency to a measurable DC level (usually logarithmic scale), and displaying the same on the CRT of the FSH6-NTG/K-6NUSMC. The CRT displays received signal strength (y-axis) against frequency (x-axis).

A7036 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A7036: GENERATOR, FUNCTION, ELEC TEST

The Function Generator, model number 33220A, is a general-purpose function generator designed to assist technicians with troubleshooting and repairing communication and electronic equipment. It is a high-performance 20 MHz synthesized function generator with built-in arbitrary waveform capability. The Function Generator uses direct digital-synthesis techniques to create a stable, accurate output signal for clean, low-distortion waveforms. It provides fast rise- and fall-time square wave, and linear ramp waveforms down to 100uHz.

A7517 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A7517: TEST SET RADIO

The GRMATS is a portable, self-contained synthetic instrumentation platform used for verification testing and fault detection, isolation and repair of communications, avionics and electronic warfare Units Under Test (UUT). The test set contains the hardware and software necessary to test and verify the performance and electrical functionality of these types of UUTs, deployed in the field or in a depot-type environment.

A8032 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A8032: SECURITY EQP, SPEECH, TACT, HALF-DUP, W-B AIRBORNE

The Speech Security Equipment (VINSON), TSEC/KY-58-2, -58-3, -58-4, and -58-5 are members of the VINSON family. The VINSON family consists of Wide Band Secure Voice (WBSV) units developed by the National Security Agency to provide line of sight half-duplex voice and data encryption at 16 kbps. The TSEC/KY-58-2, -58-3, -58-4, and -58-5 provides security for AM/FM, VHF, UHF, half-duplex Public Telephone and Telegraph combat net radios and tactical wireline systems when used with the HYX-57.

A8082 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A8082: ENCRYPTION-DECRYPTI

The General Purpose Encryption Equipment, TSEC/KG-84A, -84C is a high capacity key generator used to encrypt and decrypt teletypewriter and digital data traffic on dedicated links in both tactical and fixed plant environments. Future replacement for the TSEC/KG-84A, -84C will be the TSEC/KIV-7M or TSEC/KIV-19M.

A8089 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A8089: ENCRYPTION DEVICE, TRUNK

The Trunk Encryption Device, TSEC/KG-194, -194A are full-duplex key generators designed to provide trunk encryption and decryption for digital data traffic. The TSEC/KG-194 is a non-ruggedized, rack mounted equipment. The TSEC/KG-194A is a tactical, ruggedized equipment with a rack mounting capability. TSEC/KG-194, -194A are enhanced versions which have been modified to incorporate the FIREFLY remote re-key capability. Future replacement for the TSEC/KG-194, -194A will be the TSEC/KIV-17M or TSEC/KIV-19M.

A9001 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A9001: COMPUTER SET, DIGITAL (BLUE FORCE TRACKER)

A computer which processes information represented by combinations of discrete or discontinuous data. It is a computer for performing sequences of arithmetic and logical operations, not only on external data but also on its own internally stored instructions.

A9010 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = A9010: UNIT MOVE WORK STATION

MCEITS is the Marine Corps enterprise IT infrastructure in the MAGTF C2 framework. MCEITS consolidates IT infrastructure, hardware, software and services to achieve economies of scale, reduce redundancy and reduce overall USMC IT portfolio costs. MCEITS implements DoD Net-Centric Enterprise Services (NCES), supports Global Information Grid (GIG) and enables effective, efficient IT portfolio management.

B0003 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0003: AIR CONDITIONER, HORIZONTAL, 1.5T, 60HZ, 18K BTU

Environmental Control Units (ECU) provide horizontal and vertical configured military standard air conditioners for cooling, dehumidifying, heating, filtering and circulating air for systems requiring climate control. Refrigeration equipment provides storage of perishables for field messing facilities. Examples of supported equipment are: radar systems, communication centers and computer data systems. This program is intended to maintain its current levels of equipment and to replace aging units with environmentally compatible ECUs.

B0014 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0014: ENVIRONMENTAL CONTROL UNIT, HORIZONTAL, 36K BTU

Environmental Control Units (ECU) provide horizontal and vertical configured military standard air conditioners for cooling, dehumidifying, heating, filtering and circulating air for systems requiring climate control. Refrigeration equipment provides storage of perishables for field messing facilities.

Representative Picture

Notes: For NSN 4120-01-526-2397 (R-22 Model): DRMO/Dispose of In Theater; do NOT return to CONUS. For NSN: 4120-01-581-1276 (R-407C Model): Re-distribute within MEF FWD to fill EDL shortages. Upon return of equipment to CONUS, return to Condition Code "A" at Using Unit and make SL-3 complete. Depot Level Maintenance is NOT part of the maintenance concept for this item. Water (not to exceed 60 PSI) can be used on the external portions of the ECU's. The evaporator coil, condenser coil, and control cubicle should cleaned with compressed air. Coils need to be cleaned from the inside out in order to properly clean them out. The Forecasted Reset Strategy For Distribution shown below is TAMCN specific. There are, however, multiple distribution forecasts for this TAMCN based on the NSN. If distribution differs from below it is because MCLC used the forecast for the applicable NSN.

Notes: This equipment should not be transported by Local nationals due to the highly pilferable nature of this equipment. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. For the ECU: The evaporator coil, condenser coil, and control cubicle should cleaned with compressed air. Coils need to be cleaned from the inside out in order to properly clean them out. SL-3: SL-3-11490A.

Notes: Many of these items were ARMY assets and are not ours - follow instructions only if they are our assets. If serviceable, distribute to MEF, if unserviceable DRMO. Depot Level Maintenance is NOT part of the maintenance concept for this item. A pressure washer can be used on the interior and exterior of the box, excluding the Refrigeration Unit (RU). The RU needs to be cleaned using compressed air and coils need to be cleaned from the inside out in order to properly clean them out. SL-3: SL-3-11574A. MARCORSYSCOM has not shipped ANY of this TAMCN / NSN to OEF, so none of these are in OEF to our knowledge. Commercial boxes may look similar, but are white in color and do not have the safety features of the USMC LFRS.

Notes: Re-distribute within MEF FWD to fill EDL shortages. Upon return of equipment to CONUS, return to Condition Code "A" at Using Unit and make SL-3 complete. This is a tool kit that may be incomplete and require replacement tools/components be reordered. IMA and Depot Level Maintenance are NOT part of the maintenance concept for this item. Highly pilferable, should not go down the GLOC. All tools need to be wiped down and the exterior of the cases can be cleaned with low pressure washer. SL-3: SL-3-11502A

Notes: Funding has already been obtained for replacing all in theater, so return to CONUS only if serviceable. Depot Level Maintenance is NOT part of the maintenance concept for this item. A pressure washer can be used on the interior and exterior of the box, excluding the Refrigeration Unit (RU). The RU needs to be cleaned using compressed air and coils need to be cleaned from the inside out in order to properly clean them out. SL-3: SL-3-11609A.

B0092 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0092: TRAILER SET,MINE DE

The three mine detonation trailers are pulled by a single husky vehicle in order to produce large ground pressure in order to initiate pressure plate firing systems in mines and IEDs. The tires of the three trailers are staggered in a manner that ensures pressure is applied to the entire width of the travelled lane.

B0093 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0093: MINE DETECTOR SYSTE

The Husky is an armored vehicle that can detect buried metallic anti-tank mines, explosive obstacles and unexploded ordnance. It imparts low ground pressure and can be repaired in the field if it is struck by an explosive device.

B0171 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0171: BUCKET, CLAMSHELL

The Bucket, Clamshell is hydraulically operated and capable of working at, above and below ground level. It is capable of digging loose to medium type soils and suitable for excavating vertical shafts or footings, filling bins or hoppers, and unloading aggregate from flat bottom gondola railroad cars.

Notes: For NSN 6150-01-306-2943: Dispose of In Theater; Do NOT return to CONUS. For NSN 6150-01-557-1304 (new AVTRON model): Re-distribute within MEF FWD to fill EDL shortages. Upon retrograde, conduct LTI and determine worth returning to CONUS or not. If returned to CONUS, return to Condition Code "A" at Using Unit or IMA and make SL-3 complete. Re-distribute to fill any shortages within the Marine Corps; store any excess at MARCORLOGCOM. Load banks require special consideration for washdown. The internals of a load bank should never be cleaned with running water. Damp cloths can be used to wipe out any residue vacuums won't remove. Water can be used to clean the exterior of a load bank as long as all doors are tightly closed and high pressure water is not directed into any seem or opening on the load bank. SL-3: SL-3-07500C The Forecasted Reset Strategy For Distribution shown below is TAMCN specific. There are, however, multiple distribution forecasts for this TAMCN based on the NSN. If distribution differs from below it is because MCLC used the forecast for the applicable NSN.

B0640 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0640: FLOODLIGHT SET

The Floodlight Set will be a self-contained skid mounted system, utilizing JP/5/8 fuel standard engine that is air, trailer, or truck transportable. It will provide 300k lumens from multiple lamps from a singular mast extendable to at least 30 feet in height when trailer mounted and have four removable mobile masts that provide at least 2k lumens each. The system will be capable of operating eight (8) hours continuously without intervention.

6230015308890	276	50%	0%	50%	0%	0%	No	No	No	No	No	138	0	138

Notes: NSN 6230-01-530-8890: Re-distribute within MEF FWD to fill EDL shortages. Upon return of equipment to CONUS, return to Condition Code "A" at Using Unit and make SL-3 complete. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. SL-3: SL-3-11120A

Notes: For NSN 6115-01-150-414- MEP-016B and NSN 6115-01-456-5046: DRMO/Dispose of In theater; do NOT return to CONUS. For NSN 6115-01-285-3012, MEP-831A: Upon return of equipment to CONUS, return to Condition Code "A" at IMA and make SL-3 complete. Depot Level Maintenance is NOT part of the maintenance concept for this item. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. SL-3: SL-3-6115.

B0980 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B0980: GENERATOR, LTWT, MAN-PORTABLE

The Tactical Quiet Generators (TQG's) are currently being procured and fielded to replace the Military Standard Generators. The updated TQGs feature an enhanced noise suppression capability, reduced O&M costs, and EPA compliance for emissions.

6115014351565	86	75%	0%	25%	0%	0%	No	No	No	N/A	No	22	0	64
6115014351567	0	75%	0%	25%	0%	0%	No	No	No	N/A	No	2	0	8

Notes: NSN 6115-01-435-1565: Upon return of equipment to CONUS, return to Condition Code "A" at IMA and make SL-3 complete. Depot Level Maintenance is NOT part of the maintenance concept for this item. In order to avoid damage, generator sets should be washed down with the control panel cover closed, in the event it is necessary to clean the control panel or inside the actual control cubicle this should be done by hand with a dry cloth, compressed air or vacuum system. During the external wash down the exhaust port should be taped over to prevent water intrusion. When the set doors are opened to clean inside the set, care must be taken so that water does not contact any electrical components. This often dictates hand cleaning (damp rags, compressed air, vacuums). Low to medium pressure water can be used in and around the engine portion of the generator as long as extreme care is taken not to overspray onto electrical components. SL-3: SL-3-6115.

B1139 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B1139: HOSE REEL SYSTEM

The Hose Reel System (HRS) provides linear fuel transfer capability and interfaces with other Marine Corps Tactical Fuel System equipment. Each HRS provides a 5 mile reach with 11 reels each containing 2400' of lightweight, layflat hoses and 2 hose reel bases with power units to control the speed and direction of the operation. The HRS is ISO configured to accommodate its transportation requirements and can be stored and transferred in four 8'x8'x20' ISO containers. The HRS will link together elements of the Amphibious Assault Fuel System.

B1645 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B1645: REFRIGERATION UNIT, ENHANCED F/RIGID BOX

Environmental Control Units (ECU) provide horizontal and vertical configured military standard air conditioners for cooling, dehumidifying, heating, filtering and circulating air for systems requiring climate control. Refrigeration equipment provides storage of perishables for field messing facilities. Examples of supported equipment are: radar systems, communication centers and computer data systems. This program is intended to maintain its current levels of equipment and to replace aging units with environmentally compatible ECUs.

B1720 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = B1720: REINFORCEMENT SET - MGB

The B1720 Link Reinforcement Set(LRS) is a SAC-3 Item. The LRS is a component of the Medium Girder Bridge (MGB). This LRS contains all components required to construct any length bridge with reinforced MLC 70(T) MGB up to 150ft. The reinforcement is required to support crossing weight, when building a double story bridge, that spans a gap more then 12 bridge bridge bays long. In a MGB suite, there is one B1720 per two BB0152 MGBs.

Notes: If the component TAMCNs are disassociated from the MTVR, the MTVR itself can move via GLOC if it is non-serviceable and going to MCLC for depot maintenance. All items should be washed IAW MCRP 4-11.3G, Unit Embarkation Handbook, Chapter 9 and Armed Forces Pest Management Board Technical Guide No. 31. The Forecasted Reset Strategy For Distribution shown below is TAMCN specific. There are, however, multiple distribution forecasts for this TAMCN based on the NSN. If distribution differs from below it is because MCLC used the forecast for the applicable NSN.

D0016 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0016: TRLR, CARGO

The M1102H is a single axle, two wheel, steel frame trailer designed to be towed by the HMMWV. It is used to transport general cargo. A welded steel body is bolted to the frame. The body is equipped with a tailgate and mounting brackets for cargo racks and a frame for a tarpaulin cover.

D0022 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0022: TRUCK UTILITY

Representative Picture

The High Mobility Multipurpose Wheeled Vehicle Expanded Capacity Vehicle (HMMWV ECV) is the 4th generation design of the HMMWV. The HMMWV ECV is replacing the aging fleet of Base variant and A1 HMMWVs originally fielded to Marine Corps units in the mid-1980s. The ECV will not replace the HMMWVA2, rather add additional capability to support the Global War on Terrorism. ECV system upgrades include: 6.5L Turbo engine; microprocessor-controlled engine electrical start system; more powerful EPA compliant engine; increased payload (500lbs); improved corrosion prevention; and access panels to facilitate maintenance.

D0023 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0023: MINE RESISTANT AMBUSH PROTECTED (MRAP), AMBULANCE

The Cougar HEV is a versatile, diesel powered, pneumatic tired, heavily armored, multi-purpose vehicle that is urgently needed by Explosive Ordnance Disposal teams deployed in support of Operation Enduring Freedom and Operation Iraqi Freedom (OIF) to increase their survivability against Improvised Explosive Devices (IED). The Cougar HEV has adequate armor protection and possesses the capability to carry all required EOD equipment. The Cougar HEVs are also required for contingency operations in support of the Global War on Terrorism by Engineer Mine Clearing teams against IEDs.

D0034 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0034: TRUCK, UTIL, EXP CAPACITY, C2/GP, ARMORED 4-DOOR (M1165A1B3)

The High Mobility Multipurpose Wheeled Vehicle Expanded Capacity Vehicle (HMMWV ECV) is the 4th generation design of the HMMWV. The HMMWV ECV is replacing the aging fleet of Base variant and A1 HMMWVs originally fielded to Marine Corps units in the mid-1980s. The ECV will not replace the HMMWVA2, rather add additional capability to support the Global War on Terrorism. ECV system upgrades include: 6.5L Turbo engine; microprocessor-controlled engine electrical start system; more powerful EPA compliant engine; increased payload (500lbs); improved corrosion prevention; and access panels to facilitate maintenance.

D0036 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0036: MATV

The primary mission of the M-ATV is to provide protected ground mobility. The MATV is capable of operating in a threat environment involving ambushes employing the use of mines, Improvised Explosive Devices, Rocket Propelled Grenades, Explosively Formed Penetrators, and Small Arms Fire. The M-ATV was designed to enhance the effectiveness of ground combat forces with a focus on stability operations against unconventional enemy forces engaged in irregular warfare on a non-linear battlefield.

D0040 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0040: MINE RESISTANT VEHI

The SABER system with TOW missiles are a proven highly accurate and effective weapon with a very low collateral damage against point targets at distances longer (3,750m max effective range) than the enemy can effectively engage friendly forces with direct fire weapons. The ability to employ the SABER TOW missile system from an MRAP CAT I or II Independent Suspension System (ISS) equipped MRAPs allows Commanders to provide greater protection for their gun crews and engage the enemy with a precision, low collateral damage weapon system at long ranges.

D0850 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = D0850: TRLR, CARGO

The M101A3 is a single axle, two wheel, steel frame trailer designed to be towed by the HMMWV. It isused to transport general cargo. A welded steel body is bolted to the frame. The body is equipped with atailgate and mounting brackets for cargo racks and a frame for a tarpaulin cover. A steel A-frame is boltedto the frame with an attached one -position lunette, landing gear and two hand brake levers. The M101A3is designed to operate on all types of roads, cross-country terrain and in all weather conditions. There areno restrictions on the M101A3 for movement over primary and secondary roads; however, it is restricted toa maximum speed of 15-mph cross-country when towed by the M998/M1123 series trucks or other primemovers. System is archived.

E0060 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = E0060: SABER ELECTRICAL CIRCUIT TEST SET (ECIRTS)

The ECIRTS (Type IV) is the primary component of the Saber ECIRTS Tool Kit (ETK). The equipment is intended to be used in both the Pre-fire Inspection and semiannual maintenance inspections of the Saber and TOW systems. The functional use of the Saber ECIRTS is to test the Traversing Unit (TU) and Saber system for Missile type verification, Wire Cut signal and electronic Umbilical continuity of connection.

E0084 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = E0084: TAC BINOS / BINOCULAR 8X42

The tactical binocular allows individuals with different interpupillary distances to view the reticule horizontally, or to estimate range on targets that aren't perfectly level. Rugged and waterproof with a durable armor coating.

E0759 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = E0759: KIT, DISASSEMBLY, FUZE, MECHANICAL, REMOTE (MK121 MOD0)

The MRFDK is used for conducting disassembly/inserting of fuses/ordnance items for either training or exploitation in combat environments. The MRFDK will provide operator safety during hazardous operations by allowing the operator to disassemble small munitions components and fuses from a remote distance of 6 to 10 ft.

Notes: Vehicle equipped with SL-3 to include SSRI items which should be packaged up and shipped such that it can marry up with his host vehicle. All need to go back to MCLC for full depot repair due to high number of miles on the equipment. Armor deck (over powerpack) Removed. No high pressure wash in crew compartment and/or Exterior hydraulic cylinders. All SL-3 components removed for washdown/Agricultural Inspection. SL-3 should remain with PEI for shipment.

E5002 DATA, RESET STRATEGY & R2 PLANNING CONSIDERATIONS

TAMCN = E5002: TRAINER LAUNCHER F/LAWS

The AT-4, 84MM Shoulder Fired Rocket (M136) provides the Marine Corps with a fully functional, lightweight, man-portable, anti-armor weapon. The AT-4's warhead features behind-armor secondary effects. After the projectile penetrates the vehicle's armor protection, a high-pressure incendiary effect occurs. The Shoulder Launched, Multipurpose Assault Weapon (SMAW) Family of Items consists of four different 83mm rockets. Each of these rockets is launched through the Mod 0 SMAW Launcher. The SMAW Spotting Rifle is attached to the SMAW launcher and fires the spotting cartridges to mark the spot/trajectory of the rocket. The SMAW family includes HA34 (NE), HX05 (HEDP), HX06 (HEAA), and HX07 (Practice).
