

Shared Risks When Moving Your Pet Via the AMC-PE

Pets with underlying health conditions, including obesity, are at increased risk during travel. Air travel may not be possible

Sedation during air travel is not recommended. Recommend speaking with your veterinarian regarding your pet's health and potential reactions or side effects of these medications and follow the prescribing information carefully.

Kennel acclimatization is great before travel to reduce pet stress.

Pets will experience altitude changes and extreme temperatures. AMC will do their best to limit the amount of time your pets are exposed to extreme heat.

Pets may experience sensory overload during travel. Loud noises coupled with other animals and strangers near the kennel may lead to added stress and raise the risk of travel for your pet.

All pets are susceptible to the risk of heat stroke, respiratory problems, and the possibility of death during travel.

Recommend you acclimate your pet: Suggest your pet be allowed to spend time outdoors to acclimate to extreme temperatures in a secure setting where you can monitor them.

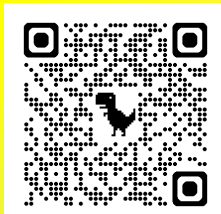

Ask Your Veterinarian

- What are the risks of air travel with my pet?
- How can I prepare my pet for travel?
- Is my pet considered a high-risk animal: (e.g., breed)

Passenger Acknowledgement of Risk During Pet Movement

- ♦ This document must be downloaded and signed before transporting your pet

HQ AMC PET TRAVEL PAMPHLET

- ♦ This pamphlet will assist you in preparing to transport your pets aboard AMC Patriot Express flights in conjunction with permanent change of station (PCS).
