

Who We Are

PM LI2S-MC is the Marine Corps primary Program Office for sustaining and modernizing the logistics chain management family of information systems which includes:

- * Global Combat Support System – Marine Corps,
- * Marine Air-Ground Task Force Logistics Support Systems,
- * Several mid-tier Enterprise Logistics Information Systems,
- * And a number of joint systems.

Our mission is to sustain and enhance the systems that enable the logistics elements of Command and Control, and Interoperability, as well as secure access to and visibility of critical logistics data.

By fully embracing Agile technologies and development constructs, we are enhancing USMC combat effectiveness through delivery of a secure logistics shared data environment featuring enterprise application integration, cloud enablement, hand-held formats, and increasing capability in a disconnected environment.

What We Provide

- ⇒ Automated supply chain management platforms providing Commanders with near real-time status on supply, maintenance and service requests
- ⇒ Integrated supply and maintenance data that facilitates a clear common operational picture for Commanders throughout an area of operation in both technologically robust and austere operating environments
- ⇒ Maintenance data collection capability provides increased equipment accountability and maintenance analysis across the Marine Corps
- ⇒ Decision support assists leaders in making informed courses of action when planning for Transformation and improvement of failure and maintenance data

Global Combat Support System- Marine Corps (GCSS-MC)

Develops and implements deployable, leading-edge technology that enables logistics modernization and maximizes combat effectiveness of the Marine Corps through improved logistics visibility.

Data Environment & Integration (DE&I)

Delivers transformational capabilities to streamline business processes, improve data accessibility, and enable analytical capabilities, producing effective, actionable business intelligence throughout the logistics chain of command.

Systems include:

- ⇒ Technical Data Management, Catalyst / Pubs
- ⇒ Logistics Data Services
- ⇒ Unique Item Identification Data Storage
- ⇒ Materiel Capability Decision Support System
- ⇒ Denied Degraded Intermittent Low-bandwidth Marine Corps Logistics

Tactical Logistics Systems (TLS)

Develops and deploys disconnected and mobile logistics information technology tools to enhance warehousing and inventory management, and to increase logistics visibility and capability to the Marine Corps. Systems include:

- ⇒ MAGTF Logistics Support Systems
 - * Transportation Capacity Planning Tool
 - * Common Logistics Command and Control System
 - * Storage Retrieval Automated Tracking Integrated System
- ⇒ Automated Manifest System Tactical Version
- ⇒ Integrated Computerized Deployment System
- ⇒ Telemetry
